BUSINESS TERMS

We Especially Invite Charge Accounts. A charge account is more convenient than to remit for each order at the time it is sent us; you pay no more for your goods by reason of this accommodation. As to our responsibility, we refer you to **Dun's** or **Bradstreet's Mercantile Agency.**

When sending your first charge order, refer, preferably, to someone with whom you have a charge account. This saves many a delay. When sending us your first order accompanied by remittance, we prefer bank cashier's check or money order, unless cash is sent; this frequently saves delays.

☞ Goods can be sent C. O. D., with the exception of perishable items, which includes plants and cold-storage bulbs. These cannot be sent C. O. D. unless a partial remittance accompanies the order.

SPECIAL NOTE

We shall be very glad to procure for our customers any seeds or other goods that seedsmen of our city list which are not in our catalogue, and include them with your shipment. Such seeds or articles will be sent out in their original packages, and will be charged to you at exactly what they would cost you if purchased direct. *No extra charge for the accommodation.*

CORRESPONDENCE IN FOREIGN LANGUAGES

For the convenience of our customers who prefer their native language, we are pleased to announce that we are prepared to correspond in German and French. Hier wird Deutsch gesprochen. Ici on parle Francais.

SHIPPING INSTRUCTIONS

Always state clearly by what method you want goods forwarded, otherwise we will ship according to our best judgment.

We shall greatly appreciate it if our customers will adopt our suggestion to send us their orders for **seeds, plants and bulbs** during January and February. Shipment need not be made until you need the goods, when they will be ready.

25 YEARS IN BUSINESS

On pages 4 to 13 inclusive, we illustrate and give some facts that, we believe, may prove interesting to our friends and customers. It will be our aim this year (our 25th Anniversary), to serve customers even better than before, if this is possible.

DELIVERY SERVICE

To points where baggage-master or package service is in operation, we can ship **all orders, which can be packed in one parcel or piece, not exceeding 50 pounds in weight,** free of transportation charges at prices quoted in this catalogue. Fertilizers in more than 25-lb. lots, or bulky packages, are not accepted by baggage-master service. Our wagon delivery also covers many sections of Philadelphia.

SPECIAL ATTENTION

We have greatly increased our facilities for handling plant orders at our Nursery, and can promise prospective buyers in this line extra-good value. We make a specialty of hardy flowers, which department is in charge of a man with many years of practical experience.

INVITATION

All customers and others interested in horticulture or agriculture are cordially invited to visit our plant establishment at Andalusia Station (N. Y. Division of P. R. R.) about 16 miles from Philadelphia. In the spring, summer and autumn we invariably have interesting displays of hardy flowers, etc. This invitation applies to our city establishment as well, at 518 Market Street, Philadelphia.

PARCEL POST INFORMATION

NOTE.—Limit of weight for delivery within the local, first and second zones, 50 pounds; to all other zones, 20 pounds.

Parcel post is an especially convenient method of shipping to the outlying or rural districts. In compiling this Catalog we have endeavored to give the shipping weights on most sundries, where their nature, size and weight permits their being sent by parcel post. Liquids and poisons are excluded from the mails. Seeds, as noted on the opposite page, are mailed free and in accordance with the schedule for those whose prices do not include prepayment free. Where customers desire goods sent by parcel post and remittance accompanies their orders, postage should be allowed in accordance with the schedules named below. Plants and bulbs in aggregate lots, in ½ dozen or less, require postage to the amount of 20% of their value. Over six and up to one dozen or more, where plants and bulbs are of a nature and weight, to permit parcel post shipment, allow for postage in the amount of 10% of their value.

Plants by Parcel Post is very unsatisfactory and uncertain, the service is full of delays and frequently when plants sent by this method arrive at their destination they are dead; we earnestly suggest to our customers the sending of plants by express (which rates are very reasonable now). We are then able to guarantee safe arrival, and invariably give larger and better plants.

TABLE OF PARCEL POST RATES

All parcels of seeds, bulbs and plants over 8 ozs., and sundries over 4 ozs. in weight come under these rates. **Any= less than 8 ozs. at the rate of 1c. for each 2 ozs.**, except sundries, which are at the rate of 1c. for each oz.

TRANSPORTATION ADVANTAGES POSSESSED BY PHILADELPHIA

Freight. Philadelphia's transportation facilities are unsurpassed by any other city in the U. S. The Pennsylvania R. R., Philadelphia & Reading R. R., Lehigh Valley R. R. and the B. & O. R. R. all have terminals in Philadelphia. These lines offer special facilities and quick transportation to any part of the U. S. Several of them touch with their own lines extreme North, South and West. Where they do not run direct, they have traffic agreements with connecting lines.

Boat Connections. The Clyde Line S. S. Co. and the Merchants & Miners S. S. Co. sail direct from Philadelphia for points as far south as Jacksonville, and the connections they have with the Mallory Line serve other extreme southern points. The Merchants & Miners Line also sails direct from Philadelphia to Boston, from where it serves points in New England. Boat transportation affords one of the quickest and most economical ways in existence today for shipping goods.

Express Service. Philadelphia is served by express service of the Adams, Wells-Fargo, and American Express Companies, which reach every part of the U. S. Goods consigned to any point on their lines can be forwarded without transfer. Express rates are extremely moderate, compared to what they were, and we recommend this service, where quick delivery is wanted and especially for the transportation of plants and other perishable goods. Seeds, Plants and Bulbs enjoy a special express rate, lower than what is demanded for carrying general merchandise.

OF IMPORTANCE TO HORTICULTURAL AND AGRICULTURAL SOCIETIES

In 1911 we adopted the idea of the Michell Seed House Medals, for achievement in Horticulture and Agriculture. These are finished in three styles, Gold, Silver and Bronze. All organizations are invited to avail themselves of the opportunity of having their members compete for these medals in various exhibitions. The only conditions we exact in connection with furnishing these medals without cost, is to have the privilege of naming the style of medal to be awarded for the respective exhibits; that the secretary also send us the name or names and addresses of the winners, so that we may have their name engraved on the medal, which are sent by insured parcel post in velvet-lined boxes. Further, that our house be given credit for the offer of these medals in all advertising literature and programs which refer to the respective exhibitions. This offer is not confined to products that are produced from our seeds, plants or bulbs only, but the medal may be competed for, regardless of from whom you get your supplies in this line, so that selfish motive is far removed. We are glad to have committees on awards confer with us freely for any horticultural or agricultural proposition, for which they desire to have these medals offered.

Civic organizations and School Garden Associations are especially invited to take advantage of these medal awards we offer.

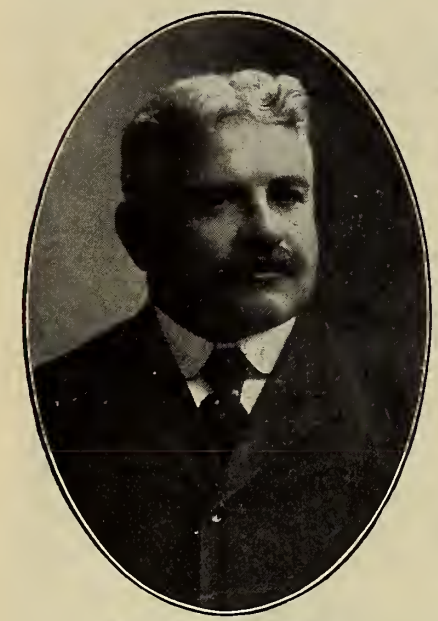
1890 TWENTY-FIVE YEARS IN BUSINESS 1915

OR A BRIEF HISTORY OF "THE HOUSE OF MICHELL"

By GEORGE C. WATSON (Contemporary)

On the Twenty-fifth Business Anniversary of my friend MICHELL, I regard it as somewhat of a privilege to be allowed to reflect on the past record of him and his business, and he has kindly consented that I do this on two pages in his 1915 Catalogue.

Coming from one of Philadelphia's foremost seed establishments, he took hold of an exceedingly small business, located at 1018 Market Street, in which building his business occupied a small basement, the half depth of the first floor and a dingy attic. His organization at that time consisted of four employees and himself. His first catalogue, at that time regarded as an extensive one, consisted of 48 pages.



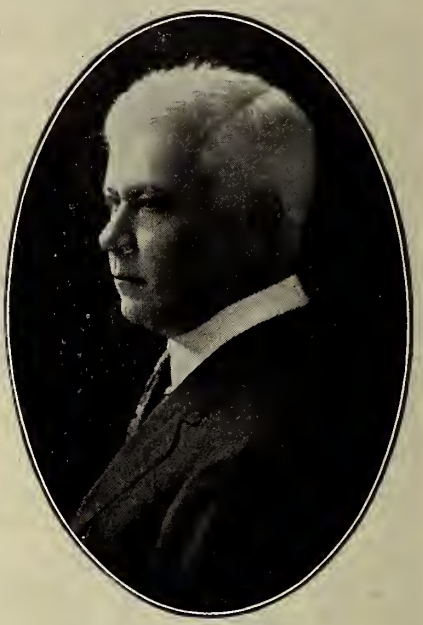
FREDERICK J. MICHELL,
Vice-President

He studied his new undertaking night and day from every angle and in a short while had laid out a plan and policy that has resulted to-day in one of the largest and most successful businesses in his line.

It was not long before he found it necessary to seek an assistant whom he could interest in his business and in this he was extremely fortunate in associating with himself his brother, FREDERICK J. MICHELL.

While HENRY F. kept house, his brother went after the outside business, and for a period of almost ten years did practically all the traveling for the firm, which to-day requires the services of 9 commercial travelers, who cover the United States from New England to the Gulf of Mexico and from the Atlantic Seaboard to the Mississippi River.

The business under the guiding hand of the founder prospered, and before long it was necessary to lease the balance of the first floor of the establishment and one-half of the second floor. Of course a few additional employees were needed, and by 1895 they numbered eleven.



HENRY F. MICHELL,
President

The business kept growing and in 1897 it was necessary to get possession of the third floor of the building, the front part of the second floor being leased out and possession of same could not be had. In that year the employees numbered 15.

Two years later the landlord decided to tear down one-half of the building, being the rear portion, in place of which he erected a modern brick structure, and that gave the business five floors in the rear and four floors in the front, the second still being occupied on a lease.

I well remember, even as late as 1897, the Stenographer was the Assistant Bookkeeper, the Cashier and she also had charge of the Paid Order Records. This is quite a contrast with requirements of to-day, when there are needed seven stenographers, three cashiers, eight bookkeepers, three bill clerks, five price clerks and two file clerks.

In 1900 it seemed as if some superhuman effort caused the business to grow by leaps and bounds and though I kept in very close touch with this wonderful establishment, it seemed that every time I would call, there would be a marked addition to the number of employees; where I at one time knew them all, now I am acquainted with a very few of his army, which numbers about 130.

In 1906 the business was incorporated and assumed the title of HENRY F. MICHELL CO., the incorporators being HENRY F. MICHELL, President and Secretary, FREDERICK J. MICHELL, Vice-President and Treasurer, from which it will be seen, that it to-day is still being directed by the founder and his brother in what would appear to be almost down to the finest detail.

The whole organization is carefully planned and each department, with a competent head to guide it, seems to work in perfect harmony with the other.

The establishment to-day is divided into the following distinct departments: Flower Seeds, Vegetable Seeds, Bulbs, Plants, Poultry Supplies, Garden Tools and Sundries, Credit, Financial, Correspondence, Sales, Purchasing, Advertising and General Administration.

In 1908, realizing that their lease on 1018 Market Street would expire two years later and looking back at the progress made a few years previous, it was decided not to re-lease, believing that it would not house for many years the rapidly growing business.

After a careful survey of Market Street properties between City Hall and the Delaware River, a building erected many years ago by Colonel James Bennett, known to most everyone in Philadelphia as "Tower Hall" was picked as a possible future home, and after giving the matter careful thought, the structure was purchased.

A BRIEF HISTORY OF "THE HOUSE OF MICHELL" (*Continuea*)

The Michell Building of 1915

Immediately it was planned to make it a modern building in every respect, and to that end approximately $40,000 were spent on the interior to make it practical and convenient, and after having seen many of the leading seed houses in the United States, I can truthfully say that it is probably the best arranged and most modern establishment of its kind.

The building is L shaped, 5 stories and basement, 23 feet wide in front, 47 feet wide in the rear and 180 feet deep. It is equipped with 3 electric elevators, a modern steam heating plant, lunch and dressing rooms.

For two years a branch store was operated in the new building, but on October 24th, 1910 the business was moved from 1018 Market to 518 Market. While the one building closed the previous evening, the following morning the business opened up in full swing in the new home and in a few days everything was running as smoothly as before. Hardly had the business been established 2 years in new quarters when it again became necessary to seek outside storage, and it just so happened at that time a 4-story warehouse and basement adjoining on Ludlow Street became vacant, and this was immediately leased for a period of years. In this building are stored the immense grass seed stocks of the firm, whose sales on this item alone for 1914 were just a little short of 600,000 lbs.

HENRY F. MICHELL is probably one of the keenest men I know for advertising his business; Realizing that a plant establishment was almost a necessary adjunct to his present equipment, during 1910 purchased a tract of fertile land comprising 18 acres, at Andalusia, Bucks Co., Pa., parallel with the main line of the N.Y. division of the Penna. R. R. Here is produced annually their main stock of Gladiolus, Cannas, Dahlias, Roses, some choice strains of Flower Seeds and hundreds of thousands of Hardy Perennial Plants, and are also conducted thousands of trials of seeds, plants and bulbs. In the last year a lease was taken on an adjoining tract of 21 acres, so that under cultivation they have a total of 39 acres. The equipment at the Nurseries consists of 12 modern greenhouses, some 1500 sash frames, 2 artesian wells for water supply, 2 packing and storage buildings, each 28 x 96 feet, 2 stories high, 2 modern dwellings, an up-to-date barn and stable with the necessary live stock. In the busy season the nursery employs about 40 men and in normal times 25. The grounds from early spring until frost time are a blaze of color and, going to and from New York, it is no rare thing to see the passengers craning their necks to behold the beauties of nature. I cite this to point out that MICHELL had in mind to make his nursery and plant establishment to advertise itself, in locating it as he did.

The Michell Building 1890 to 1899

While both MICHELLS are modest men and do not care for self-aggrandizement, I insisted on the publishing in this catalogue, their photographs, because they are good men to know. While it is impossible for distant customers to become personally acquainted, I know from experience that one transaction with the house will impress upon you its character and principle.

On pages 6 to 13 will be found a series of views, illustrating sections of the Michell business. These have been made from actual photographs. They speak for themselves.

George B. Watson

Partial View of Michell's Nurseries, Greenhouses and Trial Grounds, Andalusia, Bucks Co., Pa.

The picture shows the greenhouses, a small section of frames and hotbeds. Our equipment here, besides a valuable tract of 39 acres of highly cultivated land, consists of over 1500 hotbeds and frames, 12 modern greenhouses, packing sheds, superintendent's residence, office, etc. The latter are not shown on the photo here. At this place we annually produce and dispose of hundreds of thousands of vegetable plants, hardy perennials in hundreds of varieties, pot grown roses, cannas, etc., etc. Here also is our seed testing carried on. In summer many interesting displays of flowers may be seen and visitors are welcome every day but the Sabbath. We operate, between our nursery and our city establishment, an automobile service, which brings orders for plants, etc., which are filled at the former place, direct to our shipping department, frequently making as many as three trips a day each way, averaging close to 100 miles per day. By no other means but with a motor car could this be accomplished. Persons desiring to visit our Nurseries from Philadelphia, can adopt any of the following routes: Train, Broad St. Station, Pennsylvania R. R., time, 45 minutes; trolley, Fifth St. line, via Frankford, direct to the grounds, time, 90 minutes; automobile, Broad St. to York Road, to Oak Lane, east to Cheltenham, over Cottman St. to Frankford Ave., turn to left and continue to Andalusia. Our grounds being located at Bristol Pike and Andalusia Ave. Automobile running time 55 minutes. As this Catalog went to press, we were adding to our nursery plant a 2-story brick packing and storage house, 28 feet wide, 96 feet long.

Our transportation service consists of one double team, 4 single teams, one 3000 lb. capacity "White" automobile, one 3000 lb. capacity Autocar, and one 2000 lb. Autocar.

THE HARVESTER PEA

As an introduction of probably the pioneer pea grower of the United States, this variety should meet with great demand. We tested it out at our trial grounds last year, and although the season was unfavorable, it did remarkably well, yielding a heavy crop of large pods, filled with luscious peas. In quantity of production it compares favorably with the extra early kinds and rivals such sorts as Gradus and Laxton for flavor and eating qualities. It grows about 18 inches high, and follows the extra early varieties. Per pkt., 10c.; 25c. per pt. (postpaid, 30c.); 50c. per qt. (postpaid, 60c.); $1.75 for 4 qts.; per peck, $3.25.

MICHELL'S EXTRA EARLY "CRACKER JACK" TOMATO

For several seasons our customers have been getting splendid satisfaction from this variety. It is one of the earliest Tomatoes grown and a continuous bearer until frost, the latter being one of its chief characteristics, most early tomatoes having finished by the middle of September. The fruit is medium sized, brilliant red, very smooth and solid, with remarkably few seeds. Grows principally in clusters of from 5 to 10 tomatoes, which are invariably uniform in shape. Per pkt., 15c.; 25c. per 2 pkts.; per ½ oz., 30c.; 60c. per oz.

MICHELL'S EVERGREEN POLE LIMA BEANS

(See Illustration)

A variety which had its origin in Philadelphia. This remarkable pole lima equals the earliest for earliness, is far more productive than any other and retains at all times a beautiful green color. Pods contain on the average 5 to 6 beans. They hang in clusters, 6 to 8 in a bunch, which makes them very easy to gather. All who grow limas should have this valuable variety in the home or market garden. Pkt., 15c.; 35c. per pt.; qt., 60c.; $2.00 per 4 qts.; pk., $3.75.

Michell's Evergreen Pole Lima—the vines are loaded like this

"SURE CROP" STRINGLESS WAX BEANS

A variety which seems to always produce a good yield, regardless of conditions. The pods are long, slender and very brittle and we would consider it among the best, if not the best Wax Bean on the market to-day. The pods are rich golden yellow, produced in abundance, are practically rust-proof. The seed may be planted very early, earlier than most other Wax Beans. The originator, a man who has produced more good varieties of beans than any other, in late years has been improving this strain, until he thinks it good enough now for any one to plant. The crop is rather limited, so that early ordering is advisable. Per pkt., 10c.; 30c. per pt.; per qt., 50c.; $1.75 per 4 qts.; per peck, $3.25.

Michell's Cracker Jack Tomatoes

NEW HEAD LETTUCE "DAVEY'S IMPROVED STRAIN OF BIG BOSTON"

This seed is produced for us in a suburb of Paris, France, by one of the leading market gardeners there, where it created a heavy demand for this variety. The strain is far advanced of the usually good American "Big Boston" type of Lettuce. The outer leaves of the head are large and somewhat loosely set around a solid, buttery, well flavored heart or interior. We sold this variety extensively to some of our market gardener customers and many of them booked their order in advance for this season's supply, in event of a crop failure. It is ideal for hotbed culture in the early spring and autumn, while for summer growing it is one of the best. Per pkt., 10c.; 20c. per ½ oz.; oz., 40c.; $1.25 per ¼ lb.

"A NEW CANTALOUPE" "ANDALUSIA"

One of our private gardener customers has been working on this melon for quite some time, endeavoring to bring it to a high state of perfection. We have been observing it for a number of years, and last year we tried it out thoroughly. In eating qualities, we feel safe in saying, that no other variety surpasses it; its flesh is deep golden orange. The seed cavity is very small, almost meeting on the inside. It ripens evenly right up to the rind. It is highly flavored and reminds one instantly of the wonderful Canadian melons, which are noted for their quality. The outer skin is slightly ribbed, of a rough grayish appearance. The melons are large, making at least four portions. We want everyone, who grows cantaloupes, to try this novelty, as we feel sure it will please them. In concluding, we want to say, the variety received its odd name through the desire of the originator to call it after the name of the suburb in which our nurseries are located. 25c. per pkt.; 3 pkts. for 65c.

Michell's Improved Strain of Stringless Green Pod. This strain is without doubt the most tender string bean in cultivation, even when the pod has become quite old it still retains its stringless qualities; that, however, is not the only thing in its favor, it recommends itself through its extreme earliness, prolific and continuous bearing qualities and superior flavor. This variety can be planted successively through the entire season; its handsome round pods often seven inches long delight the eye of any housewife; they fairly melt in your mouth. The leading sort for the home or market garden. Pt. 25c., 40c. qt., 4 qts. $1.50, $2.50 per peck, bushel $10.00.

Michell's Improved Red Valentine. A carefully selected stock of this well-known variety; its popularity is due to the fact that it is one of the earliest sorts, maturing often in 45 to 50 days. It can withstand early slight frosts without injury; its foliage is immense, it always produces a heavy crop of long round deep colored pods, which if wanted in a tender stage should be picked while young, in this condition they are absolutely stringless. On account of its prolific habit, and large pod, it is desirable for market purposes, while for the home garden few can equal it. Pt. 20c., 35c. qt., 4 qts. $1.25, $2.00 per peck, bushel $8.00.

Red Valentine (*Usual Strain*). This is the old-fashioned favorite, from which the above is a distinct selection. 15c. pt., qt. 30c., $1.10 per 4 qts., peck $1.75, $7.00 per bushel.

FARMOGERM (Nitrogen Gathering Bacteria)

Michell's Danish Ball Head Cabbage

MICHELL'S CHOICE CABBAGE SEED (Long Island Grown)

One ounce will produce about 3000 plants. 4 oz. will produce enough for an acre

No grower can make a mistake in purchasing this important crop from us. Our strains are the very best to be had, selected from specimen heads in well rogued fields. Sow seeds in January or February in hotbeds, and transplant latter part of April or early in May to open ground, or an early sowing in open ground can be made as soon as weather will permit. Set the plants in rows 2 feet apart, and 12 to 18 inches apart in the row. For second early sow in April and transplant in May, or sow in May and transplant in July, setting plants in rows 3 feet apart and 2 feet in rows. Never plant cabbage in the same location two years in succession. Ask for Cultural Leaflet No. 106, which gives full directions for growing and storing cabbage.

MEDIUM AND LATE VARIETIES

Black Mexican. A medium late variety, reputed to be without exception the sweetest corn grown; while the grains are young they cook white, as the ear becomes older it cooks a violet shade on the outside, but in either stage of growth it is desirable. The ears are medium sized and are produced abundantly. Pt., 15c.; qt., 25c.; 4 qts., 75c.; peck, $1.35; bushel, $5.00.

Country Gentleman (Michell's Improved Strain). A distinct sort, with deep, fine grains which are staged irregularly on the cob. In sweetness it is unapproached and for this reason it should recommend itself to every planter. The ears are large and borne on stalks about 6 feet high, a very productive variety and desirable for either home or market use. Our Improved Strain is a careful selection of the finest type and will give unusual satisfaction. Pt., 20c.; 35c. qt.; 4 qts., $1.25; $2.25 per peck; bushel, $8.00

Country Gentleman (Usual Strain). 15c. pt.; qt., 30c.; $1.00 per 4 qts; peck, $1.50; $6.00 per bushel.

Eastwick. This corn, until some seed stock had been given to us, had been in the hands of one family for a period of many years. Through experiments, we conducted, we are convinced, that it cannot be surpassed by any for sweetness We have succeeded in working up a limited stock of it, which we offered last season for the first time. It is a tall growing sort, matures at the same time as Shoe Peg (but is much sweeter). An important characteristic of it is, that in eating it, the kernel or flesh of the grain comes out of the hull easily and the latter remains on the ear. This means that you do not have to pick your teeth after you eat Eastwick Sugar Corn. 20c. per pt.; per qt., 35c; $1.00 for 4 qts.

Late Mammoth. Gigantic ears, of extra fine quality, produced in quantity. This is the latest maturing and largest of all sweet corns. The stalks frequently are 8 and 9 feet high. Pt., 15c.; qt., 25c.; 4 qts., 75c.; peck, $1.10; bushel, $4.40.

DANDELION

While this name applies to one of the most obnoxious weeds, this variety is a valuable vegetable, grown in quantities for the New England markets, where it is prized as the first spring greens. The leaves, which are very fleshy, are boiled and served hot or cold; not alone is it appetizing but very healthy and highly recommended by physicians. Seed should be sown in spring thickly in a bed in the garden, where the plants should remain for the season, late in the fall cover the bed with a movable sash or leaves or salt hay for protection. To be real tender it must be used very early in the spring, after which the bed should be destroyed, unless it is desired to make wine from the flowers. A new bed should be made each season.

ENDIVE (*Sometimes called Chicory*)

One ounce will sow a row 200 feet long

Sow from June to August in shallow drills and when 2 inches high thin out so the plants stand 10 inches apart. When fairly well developed tie the plants together at the top with Raffia, but do this at a time when the leaves are dry, this is called the blanching process. If the plants are protected they may be left outdoors till Christmas. If wanted for later use they must be lifted late in the autumn, placed in a dry cool cellar, covering the roots with soil. If handled thus it may be had well into spring, and makes an excellent salad.

Earliest White Erfurt Kohl Rabi

KOHL RABI (One ounce will sow a row 150 feet long)

It is regrettable that this splendid vegetable is not more widely used, we would suggest that those who read these lines give it a trial and if pleased with it, recommend it to their friends. Sow seeds in early spring in hotbeds or outdoors and transplant when 3 inches high in rows 18 inches apart, 6 inches in the row. The edible part is the turnip which grows above the ground, this should be used when it attains a size of 2½ inches in diameter or less, at this stage it is extremely tender and delicious, while if it is larger it is woody. Prepared and served like turnips, except that a few of the bottom leaves can be cooked with the root. If they get old before they are used, feed to the cows, they relish them; and it gives the milk a fine flavor.

Blue or Purple Vienna. The flesh is white, with a bluish skin. Principally used for outdoor sowing. Pkt. 5c. and 10c.; 20c. per oz.; 70c. per ¼ lb.

Early White Vienna. This variety is suited for sowing under glass and for outdoors. The top is very short, thus allowing all the development to go to the root, insuring an early maturity. Very finely grained and of excellent quality. Pkt. 5c. and 10c., 15c. per ½ oz., oz. 25c., 65c. per ¼ lb.

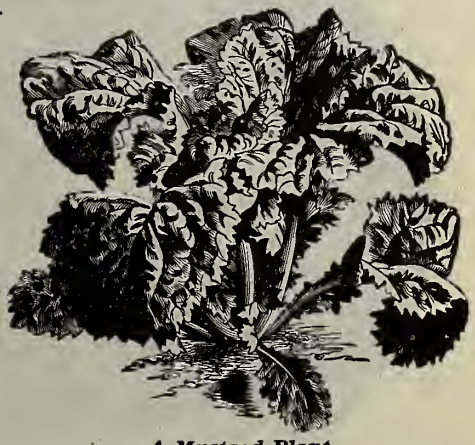
MUSTARD



A Mustard Plant

One ounce will sow a row 75 feet long. Another one of the things the average person who gardens knows nothing of except in a prepared state as a condiment. It makes a delicious green salad, pungent in taste, highly palatable and healthy. It should be sown every two weeks in a row the same as spinach, for a continuous supply, beginning in April. It must be used while young, as only then is it tender and mild. Fine winter greens if sown in a heated frame or greenhouse, also fine if served with lettuce salad for flavoring. The seed can be harvested if the plant is allowed to stand and used for other culinary purposes.

White or Yellow. 7c. per oz.; ¼ lb., 15c.; 40c. per lb.

MARTYNIA (Unicorn Plant)

A bushy plant growing two feet in height, bearing clusters of pink flowers resembling gloxinias, which afterwards turn to long green pods, which when picked are preserved the same as cucumbers, making a very tasty relish. Sow seeds in April outdoors and transplant so they stand 2 feet apart each way.

Proboscidea. Pkt. 5c. (large pkt 10c.), 15c. ½ oz., oz. 25c., 75c. per ¼ lb.

LEEK (One Ounce of Seed will sow 100 feet of drill.)

Allied to the onion family but producing no bulb, the stalks are cut and used for flavoring soups, also they are boiled and served with melted butter, and make a very palatable dish on account of their mild flavor. Sow seeds in April in rows 1 foot apart, covering the seed about an inch, when about 4 inches high transplant where it is to develop in rich soil in rows 18 inches apart, 6 inches in the row. When fully grown, hill soil against them to blanch them, about Nov. 1st take up the plants and store them in a cool cellar, placing the root end in soil 3 or 4 inches, thus a supply may be had all winter.

MICHELL'S "ALL RIGHT" LETTUCE (See Cut)
"First in Spring—Last in Fall"

LETTUCE (One ounce of Seed will produce 2500 Plants)

Our Leaflet No. 115 covers the growing of it outdoors and under glass; ask for a copy with your order or otherwise.

HEADING VARIETIES (Kopf Salat)

Michell's All-Right. This is not a variety for forcing, but rather for an early spring crop in the hotbed or outdoors; and for sowing in August for late autumn under sash or outside; where it is not affected by cold, which with some sorts turns them brown. On the other hand, this variety retains a rich green color. The heads are very large, often 12 inches in diameter, very solid and with a rich buttery heart of light yellow. Don't use this variety for a summer crop. Pkt. 10c., 15c. per ½ oz., oz. 25c., 75c. per ¼ lb., lb. $2.50.

Michell's Number One. This lettuce is a positive header under the most trying conditions. It is tender, of a decided buttery flavor, and immensely large. A valuable type for hot weather; also desirable for autumn use. This commands twice the price of other sorts, should not be used for forcing. Pkt. 10c., 15c. per ½ oz., per oz. 30c., $1.00 per ¼ lb., per lb. $3.00.

Michell's Spotted Dutch Butter (*Private Stock*). A medium sized head, light green leaves with a delicate yellow heart. The outer leaves are tinged with brown on the edges, hence the word spotted being applied. This desirable sort is suitable for forcing as well as sowing outdoors in summer. Pkt. 10c., 15c. per ½ oz., oz. 30c., $1.00 per ¼ lb., lb. $2.50.

Spotted Dutch Butter Lettuce (*Usual Strain*). Pkt. 5c. (10c. per large pkt.), 20c. per oz., ¼ lb. 50c., $1.50 per lb.

May King. The first solid head lettuce to mature outdoors, hence its name; it is of good size with a very tender full heart. Suitable for sowing under sash in the early spring; the outside leaves are tinged a golden brown. Pkt. 5c., 10c. per ½ oz., oz. 20c., 60c. per ¼ lb., lb. $2.00

Big Boston. A large flat cabbage-headed variety, splendid for midsummer or fall use or under glass in the early spring and autumn, a delightful shade of light green tinged light brown on the outer leaves. Pkt. 5c. (10c. per large pkt.), 20c. per oz., ¼ lb. 60c., $2.00 per lb.

Mammoth Salamander. One of the best of the midsummer varieties, resisting heat and drought wonderfully and remains in heading condition longer than many others. The heads are enormous, of a fresh green color; the loose leaves can all be used, as they are extremely brittle and tender. This strain is an improvement on the usual form. Pkt. 5c. (10c. per large pkt.), oz. 20c., 50c. per ¼ lb., lb. $1.75.

All Heart. An excellent lettuce for either spring or summer use. The head, while large, has a loose heart, which is of a decided buttery flavor, can be used for sowing in frames or in early summer and spring outdoors. Pkt. 10c., 15c. per ½ oz., oz. 25c., 75c. per ¼ lb., lb. $2.25.

Boston Market. Early small heading variety; one of the best for forcing; the heart is very solid, crisp and pure white. Pkt. 5c. and 10c., 20c. per oz., ¼ lb. 50c., $1.50 per lb.

Cabbage Head Giant. A monster head lettuce with a full heart, desirable especially for summer use; 6 heads will fill a half bushel basket. Pkt. 10c., 25c. per oz., ¼ lb. 80c., $2.75 per lb.

California Cream Butter. A good all-round summer lettuce. Heads are large, compact and well formed. It has a decided buttery flavor. Pkt. 5c. and 10c., 15c. oz., ¼ lb. 40c., $1.25 lb.

Davey's Improved Big Boston. Makes gigantic solid heads; excellent for under glass. 10c. pkt., ½ oz. 20c., 40c. per oz., $1.25 per ¼ lb.

Emperor Forcing. For sowing in greenhouses or in hotbeds. Heads are not large but very solid. It does not make a suitable head outdoors. Color light green, heart tender and buttery. Pkt. 5c. and 10c., 20c. per oz., ¼ lb. 50c., $1.60 per lb.

Wayahead. The earliest hard heading lettuce in cultivation, doing remarkably well either under glass or in the open in spring or autumn. The heart is a golden buttery color, and of delicious flavor. Pkt., 10c.; 15c. per ½ oz.; oz., 25c.; 65c. per ¼ lb.

Early Cabbage or White Butter. A wonderful producer of the largest sized heads; while an older variety, it still is in the lead. Excellent to sow in hotbeds for early spring use, while it may be used continuously until autumn. Color a light green with a rich delicate interior, very hardy. Pkt. 5c. and 10c., 15c. per oz., ¼ lb. 45c., $1.50 per lb.

Hanson Improved. Tremendous solid heads; the outer leaves are curled; the interior is almost white and very tender; stands the heat well, therefore excellent for summer use; this produces probably the heaviest head of lettuce of any variety. Pkt. 5c. and 10c., 20c. per oz., ¼ lb. 50c., $1.50 per lb.

See opposite page for Plants adapted for making Lettuce Dressings

Davey's Big Boston Lettuce— (see page 32)

HEADING VARIETIES—*Continued*

Unrivaled. Very large, light green and of a crisp nature. Very desirable for summer use. As a general all-round variety few lettuces can approach it. Pkt., 5c. and 10c.; 20c. per oz.; ¼ lb., 60c.; lb., $2.00.

Wonderful. Of the cabbage-headed sorts this is a leader; the color is dark green, with white interior; the heads are large, having curled outer leaves, a popular kind for summer. Pkt., 5c. and 10c.; 20c. per oz.; ¼ lb., 50c.; $1.75 per lb.

LOOSE LEAF OR CUTTING VARIETIES

For early or midsummer use, seed should be sown very thickly. When pulling the young plants try to do so with an effort to thin out the bed, thus allowing the remaining plants to become large. This class is always tender and is preferred by many to the heading varieties..

Grand Rapids (Special Strain). The leading variety in this class for forcing under glass, but it may also be grown successfully outdoors. The leaves are very curly, crisp and brittle, and have a palatable flavor. Pkt., 5c. (10c. per large pkt.); 20c. per oz.; ¼ lb., 50c.; $1.50 per lb.

Black Seeded Simpson. Ideal for midsummer use, as it withstands the most trying conditions of heat and drought. When matured, presents a formidable loose head with finely fringed leaves. Pkt., 5c. (10c. per large pkt.); 15c. per oz.; ¼ lb., 45c.; $1.50 per lb.

Early Curled Simpson (White Seeded). Similar to the above and adapted especially for earlier growing and use. Pkt., 5c.; 10c. per large pkt.; oz., 15c.; 45c. per ¼ lb.; lb., $1.50.

Silesian. This variety should be cut instead of pulled, as it makes new growth from the same root. A light green color and when given plenty of room will form a large loose head. Pkt., 5c. (10c. per large pkt.); oz., 15c.; 45c. per ¼ lb.; $1.50 per lb.

COS, OR ROMAINE, OR CELERY LETTUCE

Of French origin, this type, as will be seen by the illustration, differs greatly from the American varieties by its peculiar upright growth and its decided flavor. To have it real tender the heads must be tied together at the top so that the inner leaves blanch. It is best adapted to outdoor planting and stands the heat well. When thinning out remember that they require less room than the regular heading varieties.

Kingsholm Cos. The largest and best heading variety of this type. The inner leaves blanch almost pure white and have little or no rib, the heads are very full throughout and therefore contain more edible part. Pkt., 5c. (large pkt., 10c.); 20c. per oz.; ¼ lb., 50c.; $1.50 per lb.

Trianon Self-Folding. The peculiarity of this sort lies in the fact that the crown of leaves overlap each other which closes over the heart, thus rendering it self-blanching. It is very early and ready for use ahead of the Kingsholm variety. Pkt., 5c. (10c. per large pkt.); oz., 20c.; 50c. per ¼ lb.; lb., $1.50.

Kingsholm Cos Lettuce, sometimes called Celery Lettuce

Lettuce Plants

We can supply these at all seasons in heading varieties. 40c. per 100 (postpaid 50c.); $3.00 per 1000.

PLANTS AND SEEDS OF PLANTS USED FOR GARNISHING AND FLAVORING LETTUCE

Tarragon (Estragon). This plant is perfectly hardy and once established remains for years, the foliage is finely cut and spread over the lettuce. It is also put into vinegar, to which it imparts a flavor. Plants, 25c. each; doz., $2.50.

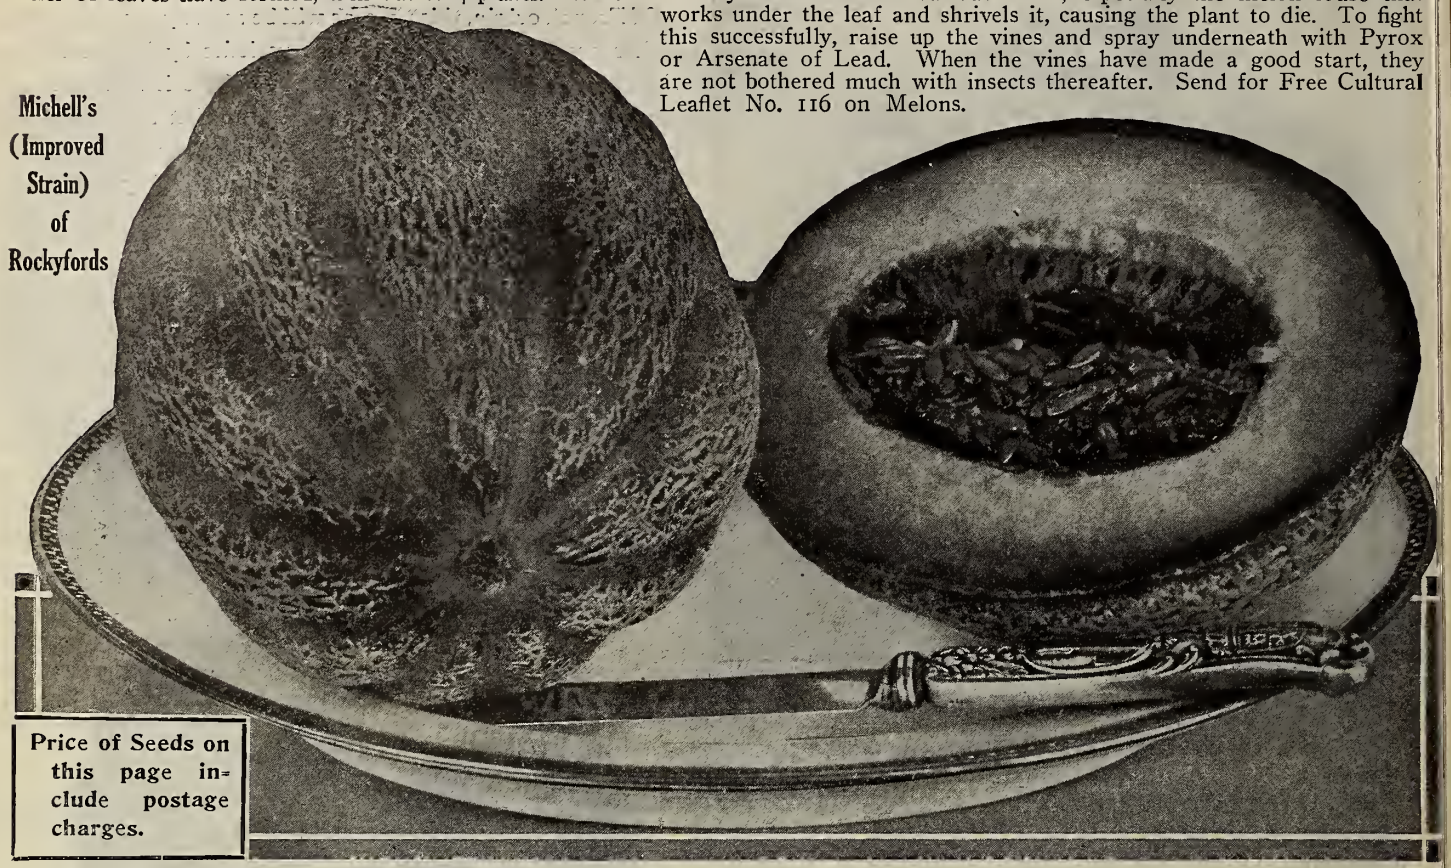
Chervil. One of the most delicious flavoring plants in cultivation, the leaves resemble a fern leaf parsley, are finely cut and mixed with the lettuce, or they can be distributed as gathered on top. To have a succession, sow seed every two weeks. Seed, 5c. pkt. (10c. per large pkt.); oz., 15c.; 50c. per ¼ lb.; $1.75 per lb.

Chives. This possesses a delicate onion flavor liked by many, it adds a piquancy without being objectionable like onion. The top is cut off the plant (not too close) and chopped finely and added in small quantities to the dish of salad. It is hardy and needs to be planted once only. Clumps, 10c. each; doz., $1.00; $7.00 per 100.

MICHELL'S MUSKMELON or CANTELOUPE

One ounce will plant 75 hills; 2½ lbs. for an acre.

While these do best or reach their greatest perfection in a light sandy loam, any good well-prepared garden soil suits them. Plant when the ground has become permanently warm in hills 6 feet apart each way, 8 to 10 seeds in a hill. After the second tier of leaves have formed, thin out to 4 plants. Watch carefully for insects of various kinds, especially the melon louse that works under the leaf and shrivels it, causing the plant to die. To fight this successfully, raise up the vines and spray underneath with Pyrox or Arsenate of Lead. When the vines have made a good start, they are not bothered much with insects thereafter. Send for Free Cultural Leaflet No. 116 on Melons.



Michell's (Improved Strain) of Rockyfords

Burrel Gem. Like the Rockyford, except the flesh is a rich orange. With only a small seed cavity. Pkt., 5c. (10c. per large pkt.); 15c. per oz.; ¼ lb., 40c.; $1.25 per lb.

Defender. Salmon flesh, oval-shaped, of fine flavor; medium size, slightly ribbed; an older variety which lately has come into great demand on account of its good qualities. 5c. and 10c. pkt.; oz., 15c.; 40c. ¼ lb.; lb., $1.25.

Eden Gem. An improved Rockyford, but more round in shape and not ribbed, but heavily netted; thick green flesh of delicious flavor. 5c. and 10c. pkt.; oz., 15c.; 40c. ¼ lb.; lb., $1.25.

Emerald Gem. Among the standard varieties, this has long been a leader. The flesh, which is thicker than any other melon of the same shape, is a rich salmon shade and ripens extremely close to the rind. It is exceedingly sweet and one of the melons, when you eat once of, you remember for a long while. Pkt., 5c. (10c. per large pkt.); oz., 15c.; 40c. per ¼ lb.; lb., $1.25.

Extra Early Hackensack. A selection of the old Turk's Cap type, ripening fully a week earlier. It is well netted, deeply ribbed, making it ideal for cutting in slices on account of its large size. The flesh is light green, very thick and ripens well to the rind. The shape is even more flat than the Emerald Gem. Pkt., 5c.; 10c. per oz.; ¼ lb., 30c.; $1.00 per lb.

Fordhook. This is claimed to be one of the best melons ever introduced. Of flat shape like Emerald Gem, on which it is really an improvement. The flesh is a beautiful salmon orange, surprisingly sweet. The fruits are very large, often weighing 2 lbs. each; is an early variety, is valuable and always prolific. The netted rind is very thin and can be eaten very closely. Pkt., 5 and 10.; 15c. per oz.; ¼ lb., 40c.; $1.25 per lb.

Golden Jenny (*Netted Gem*). This resembles the Fordhook variety in shape and style, except that it is not quite so good. Despite that, however, this is exceedingly prolific. Pkt., 5c.; 10c. per oz.; ¼ lb., 30c.; $1.00 per lb.

Andalusia. One of the finest in existence. See page 15.

Hoodoo. Medium size, round shape, of deep orange color, exceedingly luscious, a healthy grower and heavy producer. Pkt., 5c. and 10c.; 15c. oz.; ¼ lb., 40c.; $1.25 per lb.

Jenny Lind. A small, flat, very early sort, heavily netted and ribbed with green flesh, an altogether good variety to plant with others, using this for the first picking. Pkt., 5c.; 10c. per oz.; ¼ lb., 30c.; $1.00 per lb.

Michell's Delicious. This deservedly enjoys a good name, it is one of the very large irregular pumpkin-shaped melons with a smooth silver-gray rind. The flesh is very deep orange-salmon. Pkt., 15c. (2 for 25c.); 30c. per ½ oz.; oz., 60c.; $2.00 per ¼ lb.

TESTIMONIAL ON MICHELL'S VEGETABLE SEEDS FROM BRITISH WEST AFRICA

Wukari, B. W. A.

I am enclosing an order for seeds. Those previously purchased from you by Mr. Hoover have done splendidly.

C. W. GUINTER.

On page 15 the new Musk Melon "Andalusia" is described

GRAND NEW WATERMELON, TOM WATSON

(See Cut)

A very handsome large fruit, frequently 2 feet long and 12 inches in diameter. The dark green rind is a contrast to the bright scarlet flesh which, by the way, is of splendid texture and flavor; the sugary meat really melts in your mouth. Nothing can touch it in the melon line for shipping qualities, the rind being tough it will resist plenty of abuse. Pkt. 10c., 15c. oz., ¼ lb. 40c., **$1.25 per lb.**

WATER MELON

One Ounce will plant Thirty Hills, Four Pounds for an Acre

Plant in hills 10 feet apart each way or in drills 10 feet apart, dropping one seed every three feet. A little land plaster dusted over the young plant will keep the beetle away. Water melons require planting after the soil has become thoroughly warm. Ask for Leaflet No. 116, which covers melon growing fully, mailed free if asked for.

Tom Watson Watermelon. See price and description above.

Halbert Honey. An ideal family garden or home market melon. The long fruits with blunt ends are very large and weigh often 50 lbs.; the rind is very thin, dark green while the flesh is a rich crimson. It tastes like a sugar stick, as it melts under the pressure of the tongue. It is very prolific and is altogether a first-rater. Pkt. 5c., 10c. per oz., ¼ lb. 30c., 90c. per lb.

Kleckley Sweets. A sweet one to be sure, with a luscious tenderness all its own. It is not a shipping variety, as the rind sets too close to the ripe fluffy, rich red meat, when in condition to use. The melons average about 20 inches long and ripen quite early. Our strain is grown from the originator's seed stock and we can recommend it highly. Pkt. 5c. 10c. per oz., ¼ lb. 25c., 75c. per lb.

Black Boulder. A mammoth melon with very dark green, almost black rind; it is truly a boulder in a field and well deserves its name. The skin or rind is awfully resisting, covering a delicious mass of rich, red, crisp meat; a great producer and recommended for either home use or the market. Pkt. 5c., 10c. per oz.; ¼ lb., 25c.; 75c. per lb.

Dixie. The name attaches to this variety a peculiar recollection of things truly Southern, where this melon is at home. 'Tis one of the old-time favorites, roundish-long in shape. The skin is dark green, mottled light; the flesh is very sweet and ripens close to the rind. Pkt. 5c., 10c. per oz., ¼ lb. 25c., 70c. per lb.

Cuban Queen. Very similar in description to Dixie, except the melon is of mammoth size; it is very solid and good for shipping or home use. Pkt. 5c., 10c. per oz., ¼ lb. 25c., 80c. lb.

Mountain Sweet. Early and very large, oblong shape, rind dark green; flesh red, solid and sweet, a gigantic variety from whence its name is derived. Pkt. 5c., 10c. per oz., ¼ lb. 25c., 70c. per lb.

Sweet Heart. Handsome oval shape, very large, green and mottled, solid, meaty and sweet, another one of the melons that appeals to one's palate by its inestimable sweetness. Pkt. 5c.; 10c. per oz.; ¼ lb., 25c.; 75c. per lb.

MUSHROOM SPAWN

Mushrooms are within the reach of any one who has a greenhouse or a cellar. A crop is produced with good spawn, a little care and patience in about 4 to 6 weeks, and continues in bearing about two months. New beds can be started at intervals which will give a supply the entire season. The first planting can be made in July, the last in March. Summer spawned beds do not bear well. Ask for our Free Booklet on Mushroom Culture, which also describes, further, these different spawns.

BRANDYWINE PURE CULTURE SPAWN

This is an entirely new strain originating in the section of Pennsylvania that supplies the New York and Eastern markets with mushrooms. It appears to be especially full of life and we can recommend it as an early and prolific producer; mushrooms are uniform and almost pure white in color.

LAMBERT'S AMERICAN PURE CULTURE SPAWN

This type produces larger mushrooms than the English, coming into bearing somewhat earlier, and continuing to crop for a long time. This spawn is produced by selecting spores from individual specimen mushrooms and is propagated and transferred to the bricks of manure, which, when planted, produce mushrooms all of one type.

Dear Sirs:—Enclosed please find a check due you, also an order for seeds. The *Mushroom Spawn* I got from you last fall is the best I ever had. Yours truly,

Perkins' Improved Long Pod Okra

OKRA OR GUMBO

One Ounce will sow 20 ft. of row; one lb. about 300 ft.

The seed is sown in rows, thickly like peas (in ground that is rich, after the frost and cold has disappeared), in rows 3 feet apart, when about 6 inches high it should be thinned out to stand 6 inches apart in the row. The pod is used when young and tender sliced in soups and stews; what is not utilized during the summer may be harvested, cut in slices and dried in the sun; after cured in this way it should be put on the pantry shelf for use during the winter, in this way one may have delicious Chicken Gumbo soup any day of the year.

Perkins' Long Pod (Improved Strain). A wonderful dwarf type, setting pods when only a foot high. It can be planted somewhat earlier than other sorts and consequently matures sooner. The pods are exceedingly long and tender and of a dark green color. Pkt. 5c., 10c. per oz., ¼ lb., 20c.; 60c. per lb.

Dwarf Green, Improved. A very desirable sort, immensely productive, bearing very long pods well filled. It is somewhat later than the Perkins strain and the pods are not quite so great in diameter. Pkt. 5c., 10c. per oz., ¼ lb. 20c., 60c. per lb.

White Velvet or Creole. The pods of this variety are very free from ridges, being almost perfectly smooth; they are tender and very light green almost white in color. Pkt. 5c., 10c. per oz., ¼ lb. 20c., 60c. per lb.

Prizetaker Onion

Southport White Globe. A beautiful type of an almost round onion, growing to enormous size. This is perhaps the best Onion of all for family use. The flesh, when cooked, is of a rich milky color, tender and delicious flavor and in the raw state it is one of the mildest. Pkt., 5c. and 10c.; 15c. per ½ oz.; oz., 25c.; 80c. per ¼ lb.; lb., $3.00.

White Barletta. Extra early small round variety used principally for pickling. Pkt., 5c. (10c. per large pkt.); 15c. per ½ oz.; oz., 20c.; 70c. per ¼ lb.; lb., $2.25.

Bermuda White. An early variety producing an immense globe-shaped bulb, producing (if when transplanted about 4 inches apart) gigantic onions the first season. Pkt. 10c., 15c. per ½ oz., 1 oz. 25c., 75c. per ¼ lb., 1 lb. $2.75.

Bermuda Red. Similar in every way except color to the aforegoing variety. Pkt. 10c., 15c. per ½ oz., 1 oz. 25c., 75c. per ¼ lb., 1 lb. $2.75.

ONION

For full size onions, one ounce seed will sow a 100 ft. row; 5 to 6 pounds per acre. If it is desired to grow onion sets, sow 25 to 30 pounds per acre.

Sow in the early spring in rows 2 feet or less apart, according to cultivation method employed. The seed should be firmed in the soil. If it is desired to grow full size onions the first year, thin out when three inches high, so that they stand about two or three inches apart. White onions are mildest in flavor and are recommended for early use. The yellow sorts are best for winter keeping. Cultural Leaflet No. 118 gives excellent instructions in regard to onion growing. Ask for a free copy.

Ailsa Craig. The largest of all onions, often weighing three lbs. and over, each. In England it is the foremost variety and will be seen there on exhibition during all vegetable shows. It is globe-shaped, slightly pointed at the top and base; the color is a beautiful straw yellow. To obtain best results sow seed in the hotbed and later transplanted where it is to grow; in planting place 4 to 6 inches apart and thus procure gigantic specimens. 10c. pkt.; ½ oz., 15c.; 30c. oz.; ¼ lb., $1.00; lb., $3.00.

Prizetaker. This mammoth yellow variety if sown thinly produces full size onions in one season from seed, rivaling with the Bermuda varieties for size and flavor, often weighing 3 lbs. and more. Pkt. 5c. (10c. per large pkt.), oz. 20c., 60c. per ¼ lb., $2.00 per lb.

Danver's Yellow Globe. This almost round in shape onion is extensively sown by the private and market gardener on account of its good keeping qualities. It is a dark straw color and always produces a good crop, growing to large size. Pkt., 5c (10c. per large pkt.); oz., 15c.; 50c. per ¼ lb.; lb., $1.75.

Southport Yellow Globe. Similar to the Danvers except larger in size, more like the Prizetaker. This is probably one of the most uniform growing varieties, every bulb being almost perfectly round and of the same size; light straw colored skin. Pkt., 5c. (10c. per large pkt.); oz., 20c.; 50c. per ¼ lb.; lb., $1.75.

Yellow Strasburg (*or Dutch*). A dark straw color skinned sort, almost flat in shape but a large onion. Its fine keeping qualities is what recommends itself to the home as well as the market gardener. For a yellow sort it is rather mildly flavored; for growing sets more of this variety is sold than any other; one of the best winter keepers. Pkt. 5c. (10c. per large pkt.), oz. 15c., 40c. per ¼ lb., lb. $1.50.

Large Red Wethersfield. A flat large growing variety. This class are excellent winter keepers, being flavored much like the yellow sorts; full size onions can be grown from the seed in one season. Pkt., 5c. (large pkt., 10c.); oz., 20c.; ¼ lb., 50c.; lb., $1.50.

White or Silver Skin. The standard white onion for market or home use, it is of very mild flavor, semi-globe shaped and is very uniform in growth and size. Pkt. 5c. (10c. per large pkt.), ½ oz., 15c.; 25c. per oz.; ¼ lb., 65c.; $2.25 per lb.

ONION SETS

One quart will plant a row about 50 feet.

Used for an early crop of onions, and should be planted just as soon as the ground can be worked. Press the bulb in the ground lightly and do not cover; in rows 12 inches apart, 2 inches apart in the row; so that all the development goes in the onion; on signs of their going to seed, bend the top over, but do not break it off. They can be harvested in this locality for winter storage as early as July 10th. The advantage in planting sets lies in the fact that the young onion is ready in 5 weeks from time of planting, while those grown from seed cannot be used until well in the autumn.

New Apple Pepper. A variety of novel appearance, having the form of an apple standing upright on the plant; first green it afterwards turns a brilliant red, very mild in flavor. For prolificness nothing can surpass it, beginning very early it continues to bear until killed by frost; about 3 inches in diameter. Choice seed grown at our Evergreen Seed Gardens (limited supply). 10c. pkt., 3 pkts. 25c.

Chinese Giant. This is a real monster pepper, perfectly sweet, the fruit is green turning to bright scarlet, matures very late, a very shy seeder. Fine for stuffed mangoes Pkt., 10c.; 25c. ½ oz; oz., 45c.; $1.50 per ¼ lb.

Large Bell or Bull Nose. The standard pepper for either market or home consumption. Very thick flesh, perfectly mild, and a great producer. The large fruits are green, but later turn a vivid scarlet; fine for slicing on tomatoes or stuffed as mangoes. Pkt., 5c. (10c. per large pkt.); ½ oz., 15c.; oz., 25c.: 80c. per ¼ lb.

Neapolitan. This variety is an excellent one, grows a long shape and somewhat narrow; it stands upright on the bushes. The fruit is sweet and bright red; a very early sort. Pkt. 10c., ½ oz., 15c.; oz., 30c.; $1.00 per ¼ lb.

Large Sweet Spanish. A variety rivaling with Chinese Giant, is, however, not as large. Color and shape very similar, also late in maturing; for mangoes or pepper hash this is an ideal sort. Pkt. 5c. (10c. per large pkt.), ½ oz. 15c., oz. 25c., 80c. per ¼ lb.

Hot Bull Nose. This variety is identical with the Sweet sort bearing the same name, except it is used where a stronger flavor is wanted and cannot be served as a mango. Pkt. 5c. (10c. per large pkt.), ½ oz. 15c., 30c. per oz., ¼ lb. $1.00.

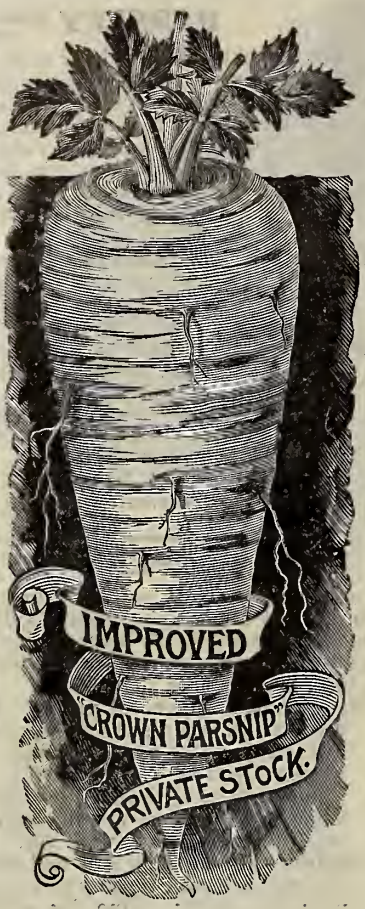
PARSNIP

One ounce will sow a row 150 feet long; 5 lbs. per acre.



Sow early in the spring in drills about 24 inches apart, covering the seed slightly, when the plants are 2 or 3 inches high, then thin out so the roots will develop; cultivate well during the growing season. The roots are especially good when slightly frosted; they may be left in the ground all winter or taken up and stored in the cellar. There are several ways of preparing them for the table, the best one probably being browning or roasting them in the oven with a choice roast of meat; cooked in this manner they excel the finest sweet potato. Send for Cultural Leaflet No. 120 on growing and storing parsnips.

Improved Sugar or Hollow Crown. A very thick broad-topped root, which makes it easily lifted. Flesh is very fine grained and sweet, while the outer surface is smooth and almost white, it yields enormous crops growing to a large size. Pkt. 5c., 10c. per oz., ¼ lb. 25c., 75c. lb.

Gurnsey or Student. Slightly shorter than the Hollow Crown variety with a somewhat broader top or shoulder; it can also be sown a trifle later if necessary. Pkt. 5c., 10c. per oz., ¼ lb. 25c., 75c. lb.

PEANUTS

One bushel nuts unshelled will plant an acre, but shell must be removed beforehand.

It is generally believed peanuts cannot be grown anywhere north of Virginia, but this is a mistake, most any well drained garden soil suits them, where they will yield a big crop. The peanut plant rather enriches the soil instead of impoverishing it, as it is an abundant gatherer of free nitrogen. A few important points are necessary in growing them and these are elaborated on in special Culture Leaflet No. 119, which may be had free for the asking.

Selected Virginia, 15c. pint (by mail 20c.), 25c. qt. (by mail 35c.), 50c. for 4 qts., peck 75c.

Place 8 to 10 seeds in a hill, and when the third stage of leaves are set, thin out to about 4 plants in a hill. Some varieties, as will be noted below, are ideal for pie-making, more delicious than some of the pumpkins. Cultural Leaflet No. 124 covers squash growing fully. It is free.

MICHELL'S RECLEANED LAWN GRASS SEEDS

Grounds of the new Masonic Homes, Elizabethtown, Pa. (showing Grand Lodge Hall), sown exclusively with Michell's Grass Seeds. The Committee having in charge the installation of the buildings and the arrangement of the grounds, after exhaustive inquiry and reports on purity and germination tests of Grass Seeds, awarded us the entire contract for supplying Grass Seeds to sow their immense tract of lawn.

MICHELL'S GRASS SEED "TOP NOTCH"

25 POUNDS PER BUSHEL

At any price it would hardly be possible to get together a more perfect blend of thoroughly recleaned grasses than this mixture. From experiments made it seems to do unusually well under most every condition of soil, weather and climate, retaining at all times its brilliant green color. Again we have frequently been asked on orders to send a lawn mixture of quality "par excellence" regardless of price, so finally decided that there was room for still greater improvement in lawns than our already high grade mixtures of grasses would produce.

Top Notch weighs **25 lbs. per bushel** and we are safe in saying that it can hardly be produced elsewhere at the price we quote it. Our grass seed sales amounting to more than half million (500,000) lbs. per year, we are able to get the choice of the Grass Seed Market. Imagine a perfect Grass Plot with a slight inkling of white clover where every tuft and blade is fine, closely grown together and without a weed. There is not a particle of chaff in this mixture and it cannot help but satisfy the most particular lawn critic. On account of the heavy nature and quality of the seed, unusual results are obtained in the shortest space of time. We recommend sowing this mixture at the rate of about 3½ to 4 bu., per acre to establish new lawns. It is not put up or sold in quantities of less than a peck. Price, $2.00 per peck (6¼ lbs.); per ½ bush., $3.75; $7.00 per bush. (of 25 lbs.); 2 bush., $13.50; $32.50 per 5 bush.; 100 lb. lots and over, 26c. lb.

A few of the many Testimonials received on the merits of Michell's Grass Seeds:

The 30 bushels of Green Velvet Grass Seed received from you last month was sown in three different places (about seven acres in all). I feel proud when I say it was the best seed I ever handled; the lawns it made are great.

D. J. Bennett,
Supt. to Percy Leavitt, Esq., Akron, Ohio.

Akron, Ohio, Sept. 5, 1913.

We are placing with you a second order for Green Velvet Lawn Grass, for the reason that the first lot was so satisfactory to our company that we wanted equally good results from the plot we are now sowing.

Thos. Rockwell,
East Akron Cemetery Co. Secretary.

MICHELL'S "GREEN VELVET" GRASS SEED

This mixture has stood the test of every clime and region in the United States. It is the result of many years of untiring study, labor and experimenting, coupled with the endeavor to give the man with a lawn a grass seed mixture which will produce a perfect turf. It is composed of close growing, fine leaved hardy grasses which will stand wear and tear, and outlive the severest winter, retaining at all times its lustrous green color. Our experiments have proven conclusively that only with a reliable mixture of several varieties of grasses can a quick permanent lawn be produced, for this reason we do not recommend the sowing of any one variety, such as Blue Grass, etc., alone.

Michell's Green Velvet Grass Seed weighs 20 lbs. per bushel. This fact alone is proof of its purity.

Quantity to sow. You cannot sow too much, the more the better, it means a quicker, more satisfactory and lasting result. We recommend, on new ground, to sow as follows:

1 qt. on 100 sq. feet (10 x 10); 4 qts. on 600 sq. feet (20 x 30); 1 peck on 1,500 sq. feet (30 x 50); 1 bushel on 7,000 sq. feet (70 x 100); 5 to 6 bushels per acre for best effects.

Prices: 1 pt., **20c.** (P. P. Wt., ½ lb.); 1 qt., **30c.** (P. P. Wt., 1 lb.); 4 qts., **85c.** (P. P. Wt., 3 lbs.); 1 peck, **$1.25** (P. P. Wt., 5 lbs.); 1 bu. (20 lbs.), **$5.00**; 5 bu., **$24.00**; 100-lb. lots and over 24c. lb.

The remarkably *Fine Lawns* seen at the Philadelphia National Export Exposition; The Pan-American Exposition, Buffalo; The Jamestown Exposition, Va.; The Lewis-Clarke Exposition, Portland, Ore., were seeded with **Michell's Green Velvet Grass Seed.** For years it has been extensively sown in the Public Parks and Squares of Philadelphia (including Fairmount Park). The Parks of Wilkes-Barre, Reading, Harrisburg, Penna., on the Executive Mansion Grounds, Washington, D. C., and on thousands of Country Estates.

MICHELL'S SHADED LAWN GRASS SEED

Shaded Locations produced by overhanging large trees, shrubbery, buildings, etc., have often been found difficult to keep in grass. We have made a special study of such conditions and after extensive experimenting have combined a mixture of grasses that will produce perfect swards in the most densely shaded places. It must be borne in mind that too much shade creates sour soil and to guard against this apply air-slaked lime (or land plaster where the former is not available) at the rate of 1 bushel to each 1000 square feet. Lime should be applied about every three years only, while land plaster may be applied periodically during the summer. Frequent fertilizer applications, such as bone meal or sheep manure, are a great help in establishing a thick, healthy growth of grass in shaded places. Sow seed at the same rate as recommended for Green Velvet Grass on preceding page. This mixture weighs 20 lbs. per bushel and will prove to be a remarkable success. 1 pt., **15c.**, *P. P. Weight, ½ lb.;* 1 qt., **25c.**, *P. P. Weight, 1 lb.;* 2 qts., **40c.**, *P. P. Weight, 2 lbs*; 4 qts., **75c.**, *P. P. Weight, 3 lbs.;* peck (5 lbs.), **$1.25**; bush., (20 lbs.), **$5.00**; 5 bush., **$24.00**; 100-lb. lots and over, **24c.** lb.

MICHELL'S WOODLANDS GRASS MIXTURE

At the instance of various customers on several occasions, it had been suggested that we list a grass formula for sowing in woodlands. After several tests, carefully followed up, we have arrived at a mixture of hardy grasses, that have given splendid satisfaction. It is especially adapted for thickly wooded locations (Norway Maples and Pine Trees excepted). In 6 to 8 weeks in normal weather conditions it will produce growth ready for the lawn mower. Persons desiring a grass mixture, that will do well in conditions such as we have described, will get splendid satisfaction from Michell's Woodlands Formula. On new ground sow at the rate of 4 bushels per acre; for renovating old land, 2½ bushels per acre. $1.00 per peck (5 lbs.); per bushel of 20 lbs., $4.00; $19.50 for 5 bushels; 100 lbs. and over at 19½c. per lb.

MICHELL'S EVERGREEN LAWN GRASS SEED

Where soil conditions and weather are ideal this mixture will in most cases produce a green sward in three to four weeks. It is composed of the finest native and foreign short growing and fine bladed lawn grasses and will form a turf which can only be approached for quality by a covering of real velvet. The quantity required to sow a given space is the same as that recommended for Michell's Green Velvet on page 50. It weighs 20 lbs. per bushel and every kernel is full of vitality. Prices: Pt., **15c.**, *P. P. Weight, ½ lb.;* qt., **25c.**, *P. P. Weight, 1 lb.;* 4 qts., **65c.**, *P. P. Weight, 3 lbs.;* peck (5 lbs.), **$1.00**; bush. (20 lbs.), **$4.00**; 5 bush., **$19.50**; 100-lb. lots and over, **19½c.** lb.

MICHELL'S SEASHORE LAWN GRASS SEED

The problem of establishing a good lawn at the Seashore frequently causes concern. If 3 or 4 inches of top soil is spread over the surface, and well firmed, an application of Michell's Special Formula Seashore Lawn Mixture will produce a good lawn in 6 to 8 weeks. An occasional application of pure Sheep Manure during the spring, summer and fall months will increase the strength and color of the grass. Our Formula has been thoroughly tested out in various localities, especially at the Atlantic seaboard resorts, and has given splendid satisfaction. If the soil is exceptionally poor, and it is not possible to apply a layer of topsoil, white Clover will help to make the sod thick and also protect the grass. Sow 4 bushels per acre, in making new lawns, or 2½ bushels per acre, in renovating old lawns. Per qt., 25c., *P. P. Weight, 1 lb.;* 40c. for 2 qts., *P. P. Weight, 2 lbs.;* 4 qts., 75c., *P. P. Weight, 3 lbs.;* $1.25 per peck; per bushel, of 20 lbs., $5.00; $24.00 per 5 bushels; 100 lbs. and over, 24c. per lb.

The above illustration represents an active scene on the course of the Merion Cricket Club, Ardmore, Pa. Their grounds and putting greens are pronounced by everyone who has seen them to be perfect. Much grass on this course was produced from Michell's Seeds; and it has been the means of bringing us many customers. The course was made by that well-known expert, Fred. G. Pickering, who constructed Wolliston, Woodland and the Belmont courses in Massachusetts, Lake Placid, N. Y.; Atlanta, Ga. and numerous others. However, that golf expert, A. H. Findlay, says, that the Merion course, Pickering's latest creation, is one of the prettiest golf courses in America. (The seed, of course, being responsible for a great deal of this.)

We are especially well equipped to supply separate varieties of grass seeds of the highest quality to clubs, professionals or others who desire to do their own mixing. Our Grass Seeds are all submitted to the U. S. Dept. of Agriculture and the leading Seed Testing Stations of Europe before they are allowed to be shipped to us by our growers. By such a rigid system our customers have absolute assurance to get nothing but the best. Samples are cheerfully supplied without cost.

MICHELL'S FAIR GREENS (Golf Course) MIXTURE

The formula for this mixture was reached after a lifetime experience of the late P. F. Foy, at the time Superintendent of the Philadelphia Country Club, Bala, Pa. These grounds were conceded to be and still are among the finest golfing turf in the United States; Michell's Grass Seeds have been sown there annually for many years. The mixture is composed of short-growing, deep-rooted varieties that resist plenty of wear. It retains its color well during the severest droughts, and the clubs mentioned below are a few of the many, whose courses are seeded with Michell's Fair Greens Mixture. Golf courses to retain their permanency should receive additional sowings during the season to replace any weak or wornout spots. Sow 6 bushels per acre.

Prices: Qt., 25c. (1 lb. P. P. Wt.); 2 qts. (2 lbs. P. P. Wt.), 45c.; 4 qts. (P. P. Wt., 3 lbs.), 75c.; 1 peck (P. P. Wt., 5 lbs.), $1.25; 1 bu. (20 lbs.), $4.50; 5 bus., $21.25; 100-lb. lots and over, 21¼c. per lb.

MICHELL'S PUTTING GREENS MIXTURE

While many greens keepers prefer to make their own mixtures for this purpose, there are some who rely on the ability and experience of the seedsman. Our formula for this has been reached after many extensive tests, and those who desire to sow it will not be disappointed in the results they get from it. It is a quick-growing mixture of short, thin-bladed grasses, over which the ball can roll without resistance. In sowing Putting Greens it is wise economy to be very liberal with the seed, as these places are subjected to continuous hard use. We do not recommend less than 1 bushel of 25 lbs. (and more is better) to a green 75 foot square.

Michell's Poultry Yard Grass Seed Formula. Chickens love grass and should be placed on range, where they can get it as much as possible. Our formula germinates very quickly and makes a sod, that grows luxuriantly. We put plenty of clover seed in this mixture, as it is very nutritious and the fowls relish it. 20c. per qt. (P. P. Wt., ½ lb.); 35c. for 2 qts. (P. P. Wt., 2 lbs.); 60c. for 4 qts. (P. P. Wt., 3 lbs.); 85c. per pk. (3¾ lbs.); bu. (15 lbs.), $3.00.

Michell's Permanent Pasture Grass Seed. In the past few years ideas of what was the best way to establish a permanent grazing sod have undergone many changes. The then prevalent method of sowing timothy and clover has been found not only costly but too short lived to answer the purpose. The old custom has given way to the new, which is the sowing of a mixture of permanent grasses. Michell's Permanent Pasture Grass Seed is composed of about 10 of the best growing and most nutritious grasses and clovers for stock feeding or grazing. One sowing will last many years, although we advise additional sowings each autumn, just previous to which a light harrowing is recommended to give the grass a quick hold. Sow 3 to 4 bushels per acre on new lands or 2 bushels on established pastures (15 lbs. per bushel). Prices: Per qt., 20c. (P. P. Wt., ½ lb.); 4 qts., 50c. (P. P. Wt., 2 lbs.); pk., 85c. (3¾ lbs.); bu. (15 lbs.), $3.00; 5 bu., $13.75; 100-lb. lots, 18c. lb.; 200-lb. lots and over, 17c. lb.

Michell's Permanent Hayfield Grass Seed. While timothy is still extensively sown for this purpose, this mixture is gradually being adopted by the progressive farmer. Its main advantages are that certain grasses in the mixture will grow better in varying conditions of soil, thus giving a full crop of hay on land that otherwise might produce but a half crop of timothy and clover. Our formula is the outcome of thorough trials in every kind of soil. Sow 3 to 4 bushels per acre on new lands, or 2 bushels on established fields (15 lbs. per bushel). Prices: Per qt., 20c. (P. P. Wt., ½ lb.); 4 qts., 50c. (P. P. Wt., 2 lbs.); peck (3¾ lbs.), 85c.; bu. (15 lbs.), $3.25; 5 bu., $14.00; 100-lb. lots, 18c. lb.; 200-lb. lots and over, 17c. lb.

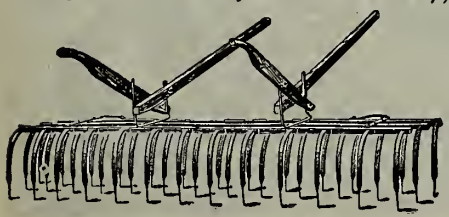
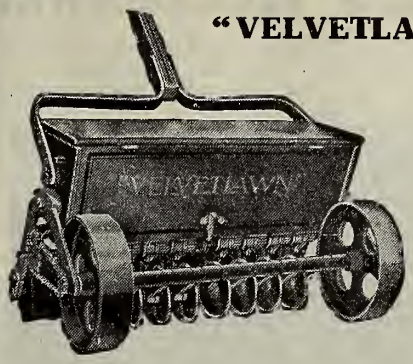
KEYSTONE ONE-HORSE WEEDER

This is an ideal implement for covering Grass seeds after sowing, just prior to rolling; also they can be used to great advantage in stirring the soil after a rain, prior to seeding, if a period of time has elapsed, between ploughing, harrowing and seeding. It can be adjusted to cover a 7½-foot stretch or graduated down to a 2½-foot stretch. Any of the teeth can easily be removed, if it is desired not to cultivate very finely. The teeth are narrow, go into the soil easily; do not cultivate deep, like other machines. Price, $10.00.



The Keystone Adjustable Weeder

"VELVETLAWN" SEEDERS



An excellent machine for properly sowing grass seed. It places it in the ground in close furrows, covers and rolls it at one operation. The result is an even, quick growth of grass. May also be used for distributing fertilizers. The horse machine is especially valuable for seeding large golf courses, pastures and lawns on private estates; for drilling in clover, alfalfa and similar seeds it works perfectly. Either machine is adapted to sowing either new lawns or old, but the problem of putting seed on old lawns and being sure it is properly covered so it will not blow away, but grow, is solved by these machines entirely. Any light horse handled by a boy can use the larger seeders, while an average man can handle the small machine.

Hand Machine, seeding 16-inch area. Price, $15.00 without press wheels; with press wheels, $18.00.

PUTTING GREENS ROLLERS

The day of the heavy roller, so far as its use on putting greens is concerned, has passed. Greenskeepers have found that a roller about 4 feet wide, weighing about 150 pounds, is the right thing. This is designated as a Golf Greens Roller. It is evenly surfaced and will not leave a mark or ridge on the greens. These rollers can be supplied by us and should be used every few days during Spring and early Summer and again in the Autumn.

MICHELL'S RECLEANED CLOVERS (PRICES SUBJECT TO MARKET CHANGES)

This line with us is a specialty. It is always economy to buy the best in farm seeds and that is just what we offer. We are extremely careful to see that all of our seeds are of the highest purity and germination tests, and our very large business in this department tends to show that this policy is the wisest.

An Alfalfa field will prove a good investment on any farm

Alfalfa or Lucerne (*Medicago Sativa*). The most valuable forage crop on the American farm today, and can be truly termed a mortgage lifter. It is sown during May, August and September, these being the best months for success, although it can be sown at other times with a possible chance of doing well. Careful preparation of the soil previous to sowing is the main thing. Our special Circular on Alfalfa goes into this carefully and is free for the asking. Sow not less than ½ bushel (30 lbs.) per acre preferably with no other crop. *Our seed is always over 99% pure,* and will invariably give the best of results. Price, per lb., 25c. Write for price on larger quantities, as it changes.

Alsike or Swedish Clover (*Trifolium Hybridum*). One of the best for mixing with timothy; it is perfectly hardy in every climate or soil condition and seldom has to be reseeded. Under ordinary conditions it grows from 1 to 2 feet high, is sown early in the spring or late summer and early autumn. It is as nutritious as red clover and is rapidly coming to the front as a valuable farm crop. The flower resembles the white clover except that the head is larger and has a red tinge on the edge. Sow 10 to 15 lbs. per acre alone or 8 lbs. per acre with timothy. Price, 25c. lb. Price on larger quantity on application.

Bokhara or Sweet Clover (*Melilotus Alba*). While extensively used as a bee food, this is a valuable variety for soiling (green manure); for sowing in spring on lands which are later to be sown in Alfalfa, this is an excellent article. It inoculates the ground and seems to render it more capable of insuring a good stand of Alfalfa than if it is not used. It grows from 3 to 5 feet high, according to soil and location; can be cut often as three times in a season if wanted for forage. Sow 15 lbs. per acre in early spring, alone, or 10 lbs. per acre with other crops. We handle only the true white flowering hardy variety. Price, 35c. per lb.; 10 lbs., $3.00.

Crimson Clover (*Trifolium Incarnatum*). Delaware Grown Seed. This is used principally for soiling or green manuring, for which purposes it is highly valuable. If desired for feed, cut it just before it flowers. When desired for green manure it should be allowed to mature; its height is from 1 to 2 feet. Sow any time from April to October, the earlier the better, 20 lbs. to the acre. If sown in early spring it can be plowed down the first year, although no other crop can be raised on the field that season. Fall or late summer seeding makes it possible to use the field the following season. It is not hardy for more than one season and must be sown each year, flowers crimson. Price, 15c. per lb.; larger quantity prices on application.

Mammoth Red Clover (*Trifolium Pratense Perenne*). Sometimes called Sapling or Pea Vine Clover and English Cow Grass. This differs from the "Medium," being of a ranker growth and yielding more fodder per acre. It ripens somewhat later and is more hardy, lasting several seasons longer than the medium red clover. It also does well on poorer soils. The seed cannot be distinguished from the former. Our supply, however, is strictly reliable. Sow in early spring or in July and August, using 20 lbs. per acre alone or with other crops 10 lbs. per acre; flowers pink. It can be harvested several times in a season. 25c. per lb.; larger quantity prices on application.

Red Clover, Medium (*Trifolium Pratense*). More widely known and used than any other, used principally for hay purposes. Height from 18 inches to 2½ feet. Sow early in the spring or in late summer—July and August; if alone, 20 lbs. per acre; if with other crops, 10 lbs. per acre. A red clover field can usually be cut twice in a season. It is not hardy for a period of years, being usually resown every third season; flowers pink. Price, 25c. lb.; larger quantity price on application.

White Dutch or Lawn Clover (*Trifolium Repens*). This is valuable for pasturage; it succeeds where other clovers and grasses fail, and it seldom dies out. It can be sown at all seasons although early spring is best; flowers greenish white. Sow 10 to 12 lbs. per acre if alone or 5 lbs. if sown on old turf or with other crops. ¼ lb., 15c.; 50c. lb.; 5 lbs., $2.40; $4.50 for 10 lbs.; bu. (60 lbs.), $24.00; $40.00 per 100 lbs.

Our Strains of Red Clover in both Mammoth and Medium types are usually fine

NITROGEN-GATHERING BACTERIA

THE WONDERFUL FERTILIZER FOR LEGUMINOUS CROPS

ALFALFA AND OTHER LEGUMINOUS FARM CROPS WILL GROW MORE ABUNDANTLY

if the soil is properly sweetened with lime and worked to a good seed bed and the seed inoculated with high-bred bacteria. Without bacteria, of the proper variety, in sufficient amounts (and in an active nitrogen-gathering condition) it is impossible to successfully grow alfalfa or other legume crop.

A United States Department of Agriculture Bulletin says:—

"It is worse than useless to attempt to grow any leguminous crop without being certain of the presence of the bacteria, which enable the plants to fix free nitrogen. Certain regions are practically devoid of the right kind of bacteria, and unless some artificial means of inoculating with the germ is resorted to, the crop will be a failure."

High-bred bacteria meets every condition above mentioned. They are grown and selected by a costly laboratory process until they develop the wonderful possible power of creating 2000 pounds of nitrates to the acre, while bacteria which may be found to exist naturally in the soil at various sections throughout the country create not more than one quarter of this amount.

High-bred bacteria is delivered in bottles ready to use by diluting with a little water and sprinkling on the seeds. Seed for ten acres can be thoroughly inoculated in ten minutes. The method of inoculation by means of a transfer of soil from fields in which a legume plant is or has been grown, is not only very costly, but weeds, molds and various soil diseases have been spread over wide areas by this primitive and unsatisfactory method.

The great Fertilizer Value of Legumes depends entirely upon Inoculation with Farmogerm. 1000 to 2000 Pounds of Nitrates to the acre can be deposited in little sacks or nodules on the roots of the legumes, which will be immediately **available for any following crop.** Legumes embrace all of the various types of clovers, peas, beans and such other plants that have blossoms similar in shape and form as the above named. This type of plant has the ability of taking from the air vast quantities of free nitrogen, which exists there and which is not absorbed by other plants than those which belong to the legume family. This nitrogen is taken (breathed so to say) through the stems of the plant and deposited at the roots in little sacks or nodules, where it becomes immediately available as plant food in the form of nitrates. The application of bacteria to the seed of these legumes when planting practically trebles the nitrogen-gathering power and for this reason we urge all planters to use it on all such occasions. Please note that the bacteria is not applicable to any other class of plant through inoculation, except as noted below; succeeding crops, though, following on ground where bacteria was used, derive tremendous benefits, as many plants that are not legumes require quantities of nitrates as plant food.

Note.—Our list this year includes three well known brands of bacteria, all widely advertised. Our purpose in offering them all is to give customers the opportunity of selecting their favorite brand.

FIELD SEED CORN

Prices on Field Corn subject to market changes

Plant 8 to 10 qts. per acre in hills sow 2½ to 3 bushel broadcast for fodder

Our strains of corn are not the common kinds usually found in abundance on the market, we pay as much attention to carefully selected stocks in all lines of farm seeds as we do the critical vegetable and flower seed part of the business. This is particularly true of field corns where re-selection means the limit of crop with little or no increase in cost. It is amazing to realize where the old unselected seed is used the average crop per acre is only half compared to the more intelligent selection of strains. Our stock is selected for size of ear and fodder, uniformity of kernel and the careful finish of the tip and butt, all of which mean a considerable increase in production.

Never use feeding Corn for Seeding Purposes

Leaming Early Dent (*Pedigreed Stock*). This variety has always been used foremost by most planters of field corn. It is readily distinguished by the beautiful long ears of deep grained, uniform kernels, resplendent in a deep shade of golden orange. The cob when shelled is very small and of reddish color. The stalks grow about 7 feet, very leafy, excellent for fodder, and on the average will produce two ears to the stalk. This strain assures the largest ears with every kernel perfect; ripens in 90 days and occasionally crops 100 bushels to the acre. On the ear only in 1 bushel crates, $4.00 per crate; 5 bushels for $18.75. (Stock of this limited.)

Leaming Early Dent. This is our usual carefully grown stock, which is excellent in every respect. Qt. 15c., 40c. for 4 qts., peck 60c., $2.25 per bu.

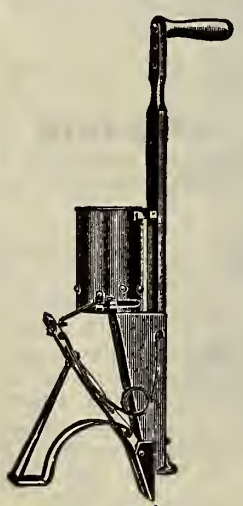
Golden Beauty. The broad massive golden yellow dented grains are arranged very evenly on gigantic cobs. The fodder is enormous, often growing 12 feet high; it matures late but yields wonderful crops; desirable for silo and ensilage purposes. Qt. 15c., 40c. per 4 qts., peck 60c. $2.25 bu.

Chester County Mammoth. A native variety of this vicinity, grown especially for us by a private expert corn raiser. The ear and stalk are almost as large as Golden Beauty. The dented kernel is deeper, however, and of a light yellow shade; a late maturer. Qt. 15c., 35c. per 4 qts., peck 60c., $2.25 per bu.

Cloud's Early Yellow Dent. Our stock of this is grown by the originator, who is extremely careful. Every grain is uniform and perfect. Though the fodder grows often 10 feet high, the crop is matured in 100 days. The ear is about 10 inches long with a very thin cob when shelled, while the canary yellow grains are about ¾ of an inch long. It delights in rich soil if the best is expected of it. Qt. 15c., 40c. for 4 qts., peck 65c., $2.25 per bu.

100 Day Bristol. This matures within the time named and produces large stalks. The ears are about 9 inches long, very thin cob when shelled. The sulphur yellow grain is dented, very broad and not very deep; an easy variety to husk. 15c. qt., 4 qts. 35c., 60c. peck, bushel $2.25.

Early Canada Flint (*Eight Rowed*). This is a medium broad grained variety, perfectly smooth on the end and very hard. Makes a desirable sort for late planting. The cobs are very thin when shelled, excellent for pigeon and poultry feed. Qt. 15c., 35c. for 4 qts., peck 60c., $2.25 per bu.



American Hand Corn Planter

Hickory King. A very broad dented white grain, white cob variety, for ensilage, silo and fodder purposes it is ideal. It matures very late, but is an enormous producer. Qt. 15c., 35c. for 4 qts., peck 60c., $2.25 per bu.

Virginia Ensilage. This grows invariably 12 to 14 feet high, stands up during the most severe windstorms. The seed is white, very deep and broad, with a thin red cob. It is the principal ensilage corn of the South. It will yield more fodder than any other variety. Qt. 10c., 30c. for 4 qts., peck 60c., $2.00 per bushel.

Red Cob Ensilage. A long narrow white grain, a late maturer and used for silo, green feed or ensilage purposes. A tall rank grower and prolific in leaves. 10c. qt., 4 qts. 30c., 50c. peck, bu. $1.85.

Eureka Yellow Dent, for Ensilage. Light canary yellow deep grained fine ear and fodder. Qt., 15c.; 35c. for 4 qts.; peck, 60c.; $2.25 bush.

AMERICAN HAND CORN PLANTER

A planter of this type is a great economizer of seed, besides saving an enormous amount of labor by rapid planting. Price, $2.00.

ALFALFA (*See page 56*)

ARTICHOKES (*See page 49*)

BUCKWHEAT

In the locality of Philadelphia this is sown anywhere from June 1st to July 15th; one bushel of 48 lbs. broadcasted to the acre. If one has the ground prepared and the opportunity, it can be sown as early as May 1st. It makes a very fine quality of flour, and is largely used for poultry food. For planting adjacent to game preserves it provides excellent food for the birds. The flower makes ideal bee food; while the straw is very abundant. Our seed is grown by a specialist in New York State, who procures his seed stock every few years from Japan. Any of the clover crops can be sown with buckwheat, these to mature the following season. Buckwheat frequently yields as much as 80 bushels to the acre.

Silver Hull. Late maturing variety; grain making whiter flour; very prolific.

Japanese. Very early variety. Dark, large grain. Price of Buckwheat, 15c. per quart; per peck, 50c. For larger quantities, price on application.

A Field of Japanese Buckwheat

BEANS, SOJA OR SOY

This very valuable farm plant enriches the ground in which it is planted by the free nitrogen gathered from the air and which is deposited in the ground by the roots, leaving it in ideal condition and rich in nitrogen for the next crop. Fodder is relished in either green or dry form by cattle and dairy cows. Excellent to combine as feed with other hay or corn. The seed when harvested and ground into meal gives milk a very rich flavor and is fed with great advantage to milch cows mixed with bran or any other soft feed. Plant ¾ bushels to the acre in drills 2½ feet apart, which will place the plants about 10 to a foot, anywhere from the 1st to the last of May. If wanted for silo it will be ready for harvest about the first of September or earlier, when the pods will be well filled; yields as high as 20 tons of green food per acre. (Per bushel, 60 lb.)

BARLEY

There is a threefold purpose in growing barley. Its straw is good for green feed or when cured, as hay. The grain in the hull is excellent poultry feed and with the latter removed is used in the household. It is a quick growing crop and very nutritious. If wanted for hay it should be cut while the grain-head is in a soft or milky condition. Sow broadcast 1½ to 2 bushels per acre from May 15th to July 1st. 48 lbs. per bushel.

Beardless. N. Y. grown stock frequently yields 50 bushels per acre. 15c. qt. Larger quantity. Price on application.

Primus (*Swedish Svaloef Pedigree Bearded*). This strain of barley is the finest in the land, and if looking for something extra in quality, this is the strain to plant. We have the genuine seed. Our supply being procured direct from the Swedish Agricultural Society, which is controlled and directed by the Government of Sweden. $1.00 per peck, per bushel, $3.25.

BROOM CORN "EVERGREEN"

The chief value of this plant lies in the top or brush, as it may be called, which is made into brooms. The fodder is suitable for bedding and grows to a height of about nine feet. This sort produces extremely straight brush, retaining its green color well after ripening, thus commanding highest market prices. Sow in May about ten pounds per acre in drills 3 feet apart. Plants should be thinned out to stand 3 inches apart in the row. It is usually in condition for cutting on the first approach of the frost, the brush part being gathered first. Yields 1000 lbs. of salable brush per acre. Bushel, 46 lbs. 15c. qt. Larger quantity price on application.

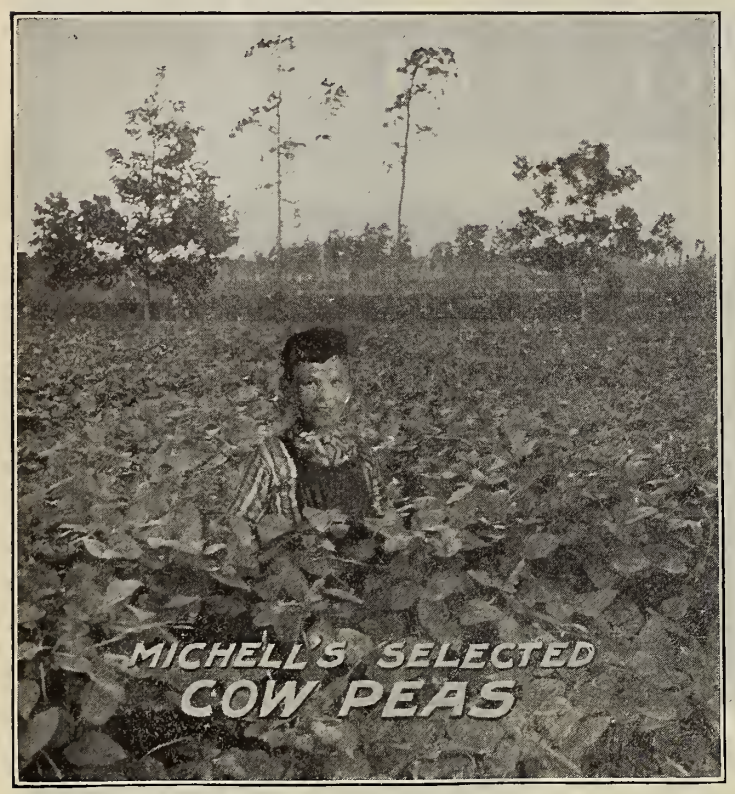
CLOVERS (*See page 56*)

FLAX

This is grown for the fibre from which linen thread is made and also for the seed from which that indispensable product, "Linseed Oil," is made. When ground it makes an excellent tonic when fed to horses, cattle and poultry. If sown to harvest seed, plant a bushel to the acre from May 15th to June 15th. If desired for the fibre, sow 1½ to 2 bushels (bushel, 56 lbs.). Lb., 10c.

Beardless Barley

GRASSES see pages 50 to 54 inclusive.



COW PEAS

Note: Occasionally some people order **Cow Peas**, thinking they are the same as **Canadian Field Peas** and sow them early and in consequence they do not germinate, as they do not stand cold, and the innocent seedsman is blamed for what is not his fault. There is a wide difference between Cow Peas and Canadian Peas, the latter which are offered in the opposite column.

Cow Peas are one of the best, largest yielding and most nutritious of the farm crops; they provide the most inexpensive methods of bringing soil back to a stage of fertility. In the South it is the staple forage crop for winter feeding. On ordinary ground they will yield from 10,000 to 20,000 lbs. of green fodder to the acre. They grow in the poorest kind of soil, taking the free nitrogen from the air, which it deposits in the ground through the roots, leaving it very rich in ammonia. The short-growing varieties are best for turning under as green manure, while the trailing sorts are desirable for hay. Cattle, sheep or hogs can be turned into a field of them and they will eat it off greedily and the stubble can be plowed under. In the latitude of Phila., sow from May 1st to July 1st, 2 bushels per acre broadcast, or 1 bushel per acre in drills. For a large crop sow the seed as late as possible and not too thick.

Black. One of popular varieties extensively grown. It is very prolific and matures early. It is of upright growth, consequently preferred for ploughing under or for raising stock.

Large Black Eye. An exceedingly heavy cropper, but late to mature. In the South, the seed of this variety is sold for dried peas for household use, and it is claimed they are quite delicious.

Whippoorwill. Medium early, upright growing. variety extensively used, more than any other. The seed is brown and gray speckled. It is a heavy producer of both pods and fodder. Some claim this variety gathers more nitrogen than others.

New Era. Of upright growing habit, quick to mature and remarkably prolific in both vines and pods. The seed is smaller and requires only from ¾ to 1 bushel for sowing an acre.

Early Ramshorn. This is a black eyed varicty, but much earlier than the regular black eyed type. The vines are enormous with an abundance of pods.

Prices: These fluctuate constantly; will be quoted on request.

NITROGEN-GATHERING BACTERIA
This will be found a very valuable preparation in connection with plantings of Cow Peas. See page 57 for full particulars.

Canadian Cluster Oats

CHOICE SEED OATS

Our prices are all based on the legal weight of 32 lbs. per bushel. Sow from April till June, 3 bushels to the acre.

Ligowo II (*Pedigreed Swedish Svaloef*). This is the heaviest strain of oats we've ever handled; it produces enormous grain heads and tall, erect straw. 65c. peck; bushel, $2.50.

Swedish or Washington. The long erect straw is noted for its ability to stand up in rough weather; grains are very plump and nearly pure white in color; this variety is especially free from rust and other disease. 15c. qt.; peck, 40c; $1.50 bushel.

Canadian Cluster. This variety is an enormous yielder, producing very large heads. Originally brought from the oat-belts of Canada, but has now been thoroughly acclimated to the climate of the United States. 15c. qt.; peck, 45c.; $1.50 bushel.

Storm King (*Pedigree Stock*). Our strain of this variety was brought from Russia three years ago and is, without a doubt, the finest and plumpest oats we have ever seen. The straw is very stiff, often measuring five feet in height. Our supply of this is limited and we recommend early ordering, as the demand usually exceeds the supply. Often yields 85 bushels per acre. 20c. qt.; peck, 60c.; $2.00 bushel.

Welcome. This is one of the popular varieties, extensively grown in the locality of Phila.; it yields a heavy stiff straw and is a large producer. 15c. qt.; peck, 35c.; $1.20 bushel.

FIELD PEAS (Canadian)

These are used for various purposes, chief among them being a very early green food; when used this way they are sown with oats about April 1st at the rate of 1½ bushel of Peas and 1½ bushel of Oats to the acre either drilled or broadcasted. They are cut just after the peas flower and fed green; sheep, hogs and cattle relish them keenly. They may be sown successively up to July if one has the available land. Peas may also be sown alone at the rate of 3 bushels per acre and furnishes excellent hay. For plowing under as green manure, they add a vast amount of nitrogen to the soil and succeeding crops sown there the same year or even later, particularly wheat, are wonderfully benefitted by producing a more luxuriant growth and larger yield. The dried peas are extensively fed to pigeons while when ground as meal is an excellent addition to the regular soft food of cows, sheep and horses. Price changes constantly and will be quoted on request.

COTTON SEED

Sea Island. If sown early in May, will mature in the latitude of Philadelphia. Pkt., 5c.; 10c. per ¼ lb.; lb., 20c.; 75c. for 5 lbs.

KAFFIR CORN—White, for Seed

This belongs to the Sugar Cane family and has great drought-resisting qualities; the grain is used for feeding poultry and the fodder for cattle, is ideal for planting where the corn seed has failed to germinate and it is too late to replant. Grows from 4 to 6 feet high, the grain being produced on the top of a stalk in the shape of a brush; frequently as many as four heads of grain will be found on a single stalk. It usually ripens after the first few frosts; produces enormous crops. Can be sown as late as July at the rate of 10 lbs. per acre in drills. Bu. (56 lbs.), 10c. qt. Price for larger quantity on application.

RAPE

Dwarf Essex. This makes an indispensable green food for sheep and hogs. It can be pastured 8 weeks after sowing; the growth is enormous; if one has the available land it is good to sow in succession, as the stock eat it close to the ground and it will not stand pasturing any great length of time; this, of course, depends on the number of head turned on an acre. Sow 6 lbs. per acre broadcast or in drills from April 1st to October 1st. It produces enormous crops and is ideal green manure. Experiment Stations recommend that stock, feeding on it, should have ready access to salt. This is an ideal food for young lambs and hogs and does well under trying conditions. 15c. lb. Price for larger quantity on application.

A Head of Japanese Millet

MILLET

Can be sown as late as July 15th and yield a tremendous crop. Is also desirable for green manuring, when it should be turned under when about 10 inches high. It makes an excellent green food for stock not allowed to pasture. If used for hay and dried it should be cut just as it matures.

Hungarian. The seed produces hay not so fine in quality as the "German," also fully a foot less in height, it can, however, be sown some 2 weeks later. Sow 1 bushel (48 lbs.) per acre. 15c. qt. Price on larger quantities on application, account of change in market value.

Japanese Barnyard. This wonderful Millet yields possibly more fodder than any other forage plant that requires so little to sow an acre. Frequently as high as 12 tons of green food has been obtained from an acre. If sown early in May it may be cut twice in one season. Sow 12 lbs. per acre broadcast anywhere from May 1st to June 15th. 10c. lb.

Pearl (*Pencillaria Spicata*). A valuable fodder plant. Enormously productive. Sow in drills 2 feet apart, 10 to 12 lbs. per acre. 12c. per lb. Price for larger quantities on application.

Tennessee, German or Golden. This requires a longer season to mature than the other sorts; it produces, however, a very fine quality of hay and makes a larger seed head. In good seasons it grows about 4 feet high. Sow 1 bushel (48 lbs.) broadcast to the acre, from April 10th to July 10th. 15c. qt. Price on larger quantities on application, account of change in values.

SEED RYE

Spring. This furnishes an excellent early green food if cut, or for pasture; the grain is used for feeding and other purposes, while the straw is a very fine quality, making a larger yield than the winter rye from which it is quite distinct, the seed being smaller. Sow 1½ bushels broadcast or in drills from May to June 1st. 56 lbs. per bu. 10c. qt. Price for larger quantity on application.

Thousandfold Winter. This makes a fine winter cover crop, being usually sown in the autumn as late as November, making a very fine yield of long stiff straw. Winter rye will not mature if sown in spring. Sow 1½ bushels per acre. 10c. qt. Larger quantity price on application.

SUGAR CANE or SORGHUM

Early Amber. Either green or in a cured state this makes ideal cattle food; it imparts a desirable flavor to milk. The seed can be thrashed out of the stalks and used as poultry feed. It is a tremendous producer, growing often 12 feet high; it stands the hot, dry weather and can be cut several times in one season. Sow 25 lbs. of seed to the acre in drills 3½ feet apart; 1 or 2 bushels broadcast. Bu. (48 lbs.), 15c. qt. Larger quantity price on application.

Sorghum Makes Fine Green Food for Dairy Cows

A Bumper Crop of Spring Rye

TIMOTHY SEED

Each year we handle a number of carloads of this. We aim to sell the purest and highest germination quality. Our prices are as low as quality will allow. **Price, 15c. per lb.** Samples and quotations on larger quantities cheerfully on request.

TEOSINTE (Reana Luxurians)

This is used extensively in the South, where it is, at times, difficult to grow forage crops on account of the long periods of drought and frequently poor soil; a single plant makes a tremendous growth, often producing as many as fifty stalks. Its foliage is like corn leaves, very broad and contain a sweet sap. Cattle eat it with a relish. It stands 5 feet high when matured, but it can be cut when two or three feet high. It produces new branches or stalks from the roots. Sow during May and June in drills 3½ feet apart, 5 to 6 lbs. per acre. 75c. lb.; 5 lbs., $3.50.

SUNFLOWER

Mammoth Russian. This makes a splendid poultry food, especially for winter use, on account of its heating and fattening qualities. Will yield sometimes as high as sixty bushels per acre. Harvest after first few frosts, cutting the seed head from the plant, piling them loosely on the grain floor or hanging them in bunches on the rafters of the barn until thoroughly dry. Sow 10 qts. per acre in drills 3 feet apart, dropping the seed about every 4 inches. 10c. qt. Price for larger quantity on application.

SPELTZ or EMMER

This grain resembles wheat but is a much larger yielder, producing frequently as high as 80 bushels of grain per acre, and that on the poorest land. The hay if cut green is desirable for horse or cattle feed, while the straw after thrashing is equal to the best wheat. The grain is desirable for feeding to hogs or poultry. Sow as you would wheat, 2 bushels to the acre any time after April 1st; the earlier the better. 15c. qt. Price for larger quantity on application.

VETCHES or TARES

This has been used in Europe for many years as a stock food and green manuring or cover crop. It does best if sown with rye, the latter gives it support and thus ensures enormous crops. It makes an ideal hay and it is a pity that every American farmer does not use it. It fertilizes the ground without further trouble or cost, on account of the free nitrogen it gathers from the air. It produces a peculiar vine plant with very narrow foliage and elongated flowers of pinkish white in clusters. The height when supported is frequently 4 feet.

Winter Vetch (*Vicia Villosa*). Sometimes called Sand or Hairy Vetch. Our stock of this is the true type, being imported by us direct from Russia and which will absolutely live throughout the winter. There is also an English strain on the market which is not hardy in the Northern sections of the United States, and buyers should beware when buying that they procure the right article, which is a small round black seed; this is far superior to Crimson Clover, as it never winter-kills. Sow from August 1st to October 1st, but the earlier the better, broadcast, 1 bushel per acre, to which we suggest adding a bushel of winter rye or wheat. In the spring it can be plowed in as green manure, or when in flower cut for hay. All stock relish it keenly. 12c. lb. Price for larger quantities on application.

Spring Vetch (*Vicia Sativa*). The seed of this is larger than the "Winter" and of a brownish gray color. It is not hardy and must, therefore, be sown in the spring during May or June, 1 to 2 bushels per acre if broadcast and 1 bushel if in drills, with either spring wheat, spring rye or oats for support. It possesses very much the same desirable features as the winter vetch. 10c. lb. Price for larger quantities on application.

SPRING WHEAT

A desirable crop to sow where fall-sown wheat has been killed by severe winter; the grain is very hard and of excellent milling quality. Macaroni is made from this variety. Our stock is grown in the extreme Northwest and is very fine.

Saskatchewan Fife. This is the favorite sort in this locality and is used on account of its prolific, vigorous growth and early qualities. It often produces 50 bushels per acre. Sow in April or May 1½ to 2 bushels per acre, broadcast or in drills. 15c. qt. Price for larger quantity on application.

WINTER WHEAT

In season we carry a large stock of the best varieties as below. Ready about September 1st. **Miracle, Fultzo-Mediterranean, Fultz, Red Wave, Silver Sheaf, Long Berry** and **Lancaster Fulcaster.** Prices and samples on application after September 1st.

Spring Wheat is an excellent catch crop where the winter variety has failed.

FLOWERS AND PLANTS FOR ROCK GARDENS

In the past few years Rock Gardens and Rockeries, although of ancient origin, have justly come in favor again. Plants grow about 20 inches high, and produce an abundance of flowers of good substance, measuring from 1 to 1½ inches across, and **show an endless variety of color.** The foliage is bright green, fern-like, and very handsome. Per pkt., 20c.; 55c. per 3 pkts.

PRIMULA OBCONICA GRANDIFLORA "CRISPA"

An entirely new form of this splendid plant, the edges of each flower being fringed and creased; fully developed flower clusters have, therefore, a more double appearance, and an elegance which cannot readily be duplicated; the flowers are of extra large size; color, from **delicate apple blossom pink to deep pink.** Per pkt., 20c.; 65c. per large pkt.

PRIMULA "MALACOIDES"

This new and pretty variety introduced from China has proved to be one of the freest-flowering species for pots and is, in consequence, already widely cultivated. The seedlings **bloom in four to five months after sowing;** resembles Primula Forbesi, but its growth is much more sturdy, and the flowers, which are borne in whorls on long stems, are much larger; color, a **pretty light lilac.** Per pkt., 25c.; 65c. per large pkt.

Primula Malacoides Alba

PRIMULA "MALACOIDES ALBA"

This new variety produces **pure white flowers;** it is equally as handsome as the lilac type form described above, and will, no doubt, soon achieve a similar share of popular favor. Per pkt., 25c.; 65c per 3 pkts.

NEW ANNUAL RED SUNFLOWER

(Helianthus Cucumerifolius Purpureus)

The bushes which branch freely are **literally covered** with flowers measuring 2½ to 3 inches in diameter in a series of shades from **pink** to **purple,** often forming a circle on yellow ground around the dark disk; even the form of the petals vary, some are straight, others twisted and curled. Per pkt., 20c.; 55c. per 3 pkts.

NEW SPENCER OR ORCHID FLOWERED SWEET PEAS

"Spencer" Sweet Peas are distinguished by their most exquisite form of flower, waved petals, their wonderful vigor in plant, stem and flower, and their ability to produce, as a rule, four gigantic blooms to the stem.

FOR GENERAL LIST AND SPECIAL MIXTURE, SEE PAGE 105

King White A "perfect" white Spencer Sweet Pea, and much superior in form, size and substance to all others of this color. Whereas the petals of other white Spencers are thin and the standards generally inclined to reflex, King White has substance to spare, while the **standards** are of **immense size, bold expanded form,** yet **exquisitely waved.** It is an extremely vigorous grower, **very floriferous** and gives a large proportion of **four-flowered sprays.** It received an Award of Merit from the National Sweet Pea Society of England, July, 1912. It was also awarded a Certificate of Merit by the Pennsylvania Horticultural Society at the Sweet Pea Show in Philadelphia, June 26th, 1913, and also by The Royal Horticultural Society of England, July, 1913.

Per pkt., 15c.; 25c. per 2 pkts.; per oz., $1.25.

Illuminator The most charming color, or rather combination of colors, yet seen in Sweet Peas, and very difficult to describe. The name conveys in part one of the charms of this beautiful variety, as the warm **salmon-orange** ground color of the flower scintillates through the **rich, bright cerise-pink** and illuminates the flower delightfully. Illuminator is of strong, vigorous growth and **blooms most profusely.** The flowers, well placed upon long, stout stems, are uniformly of great substance, the standard being bold, expanded and **attractively waved.** Awarded Certificate of Merit by the Pennsylvania Horticultural Society, Philadelphia, June 26th, 1913.

Original pkts. (25 seeds), 15c.; 25c. per 2 pkts.

Margaret Atlee One of the largest and finest Sweet Peas yet introduced. The **flowers** are of **immense size, often measuring two and one-half inches across** the standard, **exquisitely waved** and freely produced in "fours" on long, stout stems; color, a **rich glowing pink** on **cream ground,** softly suffused with salmon in the standard, while the **wings** are a pleasing shade of **pinkish rose** and **salmon.** Awarded First Prize American Sweet Pea Society at Philadelphia in 1912. Silver Medal, National Sweet Pea Society of Great Britain, London, July, 1914.

Original pkts. (20 seeds), 15c.; 25c. per 2 pkts.
Original pkts. (40 seeds), 25c.; 65c. per 3 pkts.

Wedgwood This new variety is appropriately named, as its color throughout is a **unique shade of Wedgwood blue,** —a color so popular in China and destined now to become almost equally famous in this distinct new Sweet Pea. Wedgwood produces profusely flowers of good size, borne almost uniformly in **four-flowered sprays,** well placed upon long stout stems. Of finest Spencer form, the **standard and wings are well waved.** Awarded Certificate of Merit by the Pennsylvania Horticultural Society at the Sweet Pea Show, Philadelphia, June 26th, 1913.

Original pkts. (20 seeds), 15c.; 25c. per 2 pkts.
Original pkts. (40 seeds), 25c.; 65c. per 3 pkts.

It was awarded a Certificate of Merit by the American Sweet Pea Society in 1911; the flowers are of fair size and most of the strong, stiff stems bear **four flowers each.** Of the finest Spencer type, they are throughout a **glistening,** pure **snow-white, suffused** equally through standard and wings with **delicate flesh** or **blush pink.** It comes very true and is a most beautiful variety for bunching.

Pkt., 20c.; 55c. per 3 pkts.

MICHELL'S "DISTINCTIVE" FRESH TESTED FLOWER SEEDS

Our flowerseeds have a reputation for their *superior quality* and for the *excellent results* obtained by sowing them. It is our constant endeavor to supply only such *varieties and strains* that will give the best of satisfaction.

Throughout the following pages of Flower Seeds the different varieties are designated as Annuals, Biennials, Perennials, etc., and for the benefit of those who are not familiar with these terms, we wish to make the following brief explanation:

Annuals. These grow and bloom, mature their seed and then die in the same year, such as Asters, Balsams, Poppies, Sweet Peas, Morning Glories, etc., and may be sown in the house from March to May, or outdoors after danger from frost is over.

Biennials. These grow from seed sown during mid-summer, flowering the second year, after which they die; many of the varieties bloom the first season if sown early. In this class we have Pansies, English Daisies, Campanula Medium, Dianthus, etc.

Perennials. Those which live from year to year, such as Aquilegia, Delphinium, Foxgloves, etc. Seed may be sown outdoors from June to September and transplanted late in fall into their permanent quarters, and protected during winter with a light litter of straw or leaves. The hardy perennials not usually needing any protection after the first winter; the half-hardy perennials require protection during the winter, and the tender perennials during the winter require greenhouse protection.

MICHELL'S SUPERB ASTERS

We can imagine no other flower which combines so much beauty with grace and usefulness and with which more brilliant effects can be achieved. From July till September this flower reigns supreme in the garden, not equaled by any other. For these obvious reasons we give, perhaps, more attention to these flowers than any other and are in position to offer our patrons remarkably fine strains, producing perfect flowers of great beauty. Many of the strains we offer are grown under our own supervision by specialists in this country, others are imported from most reliable sources. To have early flowers sow the seed in the house from March till May; otherwise sow outdoors after danger from frost has passed. To do well Asters require a well pulverized soil, always kept open by continuous cultivation.

Pink Superb Aster

NEW ASTER MICHELL'S PINK SUPERB

269 We are pleased to be able to again offer to our customers this new and valuable variety of Aster, which is really "Superb" in every sense of the word. The flowers are of immense size, petals long and broad, those in the centre lie curled and incurved to such an extent that the crown is completely covered; the general appearance of the flower being that of an immense flat Chrysanthemum; color, a beautiful light, or shell pink. One of the admirable features of this new variety is the exceedingly long stems, which usually measure 34 to 36 inches in length, making it a valuable sort for cutting. Per pkt., 25c.; 65c. per large pkt.; per ¼ oz., $2.00, $7.50 per oz.

Aster—Michell's Improved Semple's Branching

MICHELL'S IMPROVED SEMPLE'S BRANCHING ASTER

This is the finest late Aster we can recommend. The deep, heavy incurved flowers are borne on rigid stems often 2 feet and more in length. The colors are superb and can be used to advantage as a cut flower. What we offer is not the aster which is usually known by that name, but something much superior, as we are extremely critical in the selection of specimens for seeding. During the past season we have received numerous testimonials on the strength of the quality of this aster.

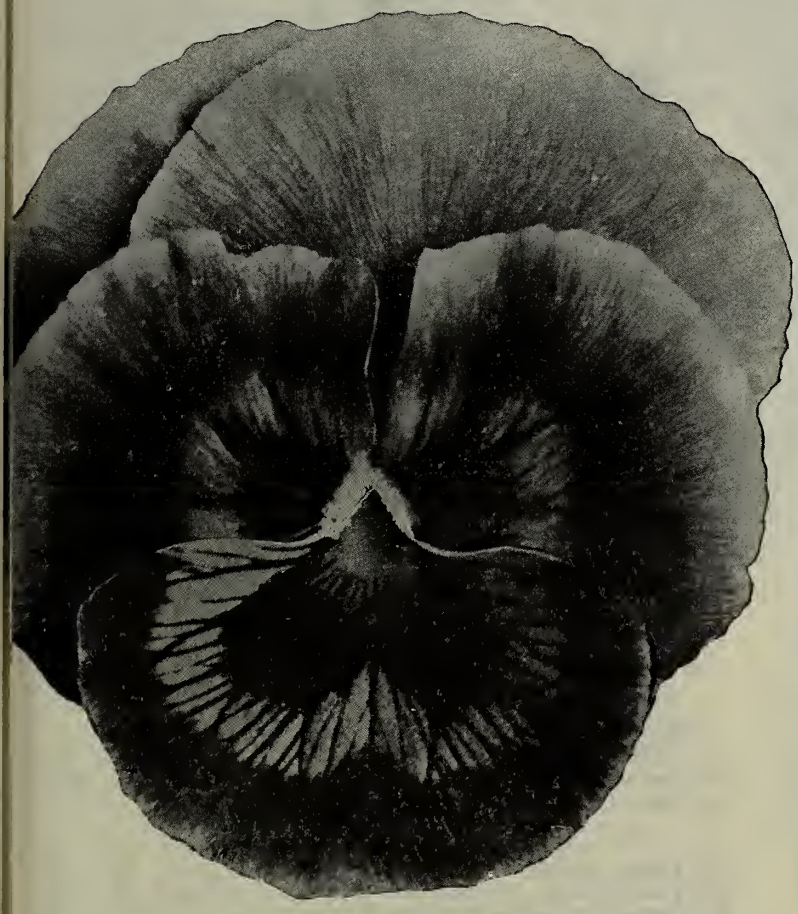
MICHELL'S GIANT PANSIES



Michell's Giant Exhibition Pansy

Strictly considered, this is a biennial, but the fact that it flowers the first season from seed recommends it for an annual. There are actually three seasons in which pansies can be planted. If started in the house from February till April pansies will begin to bloom from July on; sown outdoors in May beautiful flowers are produced in the fall; sown in frames during July and August and transplanted later gives us the main crop of flowers the following spring. Pansies thrive best in moist semi-shady situations.

MICHELL'S "NEW SPENCER" OR ORCHID FLOWERED SWEET PEAS

New Spencer Sweet Pea

Nothing within recent years can approach in importance the introduction of the "Spencer" Sweet Peas. Though but few years old they revolutionize all former conclusions. They are distinguished from the standard sorts by the enormous flowers with crinkled and wavy petals, and also from the fact that they usually bear four blossoms on a stem.

A type of Michell's Giant Flowering Mixture of Gladiolus

MICHELL'S SUPERB GLADIOLUS (Bulbs)

What a wonderful stride this flower has made during recent years. Its popularity to-day is exceeded by few other flowers and it has by no means reached its limit. And there are good reasons for this popularity. Failure with this flower has never been known. They will grow in any open position and bloom well. They are not only showy in the garden but when cut with the first flower open will last for 10 days in the house. The newer colorings defy the choicest orchids. Plant bulbs 4 inches deep, 6 inches apart and stake when 2 feet high. Flowers appear from early July until late in the fall.

GOLD MEDAL STRAIN MIXTURES

This strain which is offered in mixtures of distinct shades originated with the celebrated Gladiolus Specialist, Mr. Groff, who after careful reselection considers what is offered as the Gold Medal Strain, the very cream of all his collection. In order to distinguish between the Gold and Silver Trophy Strain, we wish to state that the selection has been made along these lines, larger flowers, rarer colors, ideal stems and types of extended flowering period. These are equal to the best named varieties, but simply have never been christened.

Section 1. All shades and combinations of red, scarlet and crimson. Each 12c.; $1.00 per doz.; $7.00 per 100, by express collect.

Section 2. Contains all the finest shades of yellow, delicate pink, rose and white. Each 15c.; $1.50 per doz.; $10.00 per 100, by express collect.

Section 3. This embraces all the shades of blue, heliotrope, mauve, lilac and similar colors. (No smoky or slate blues.) Each, 20c.; $1.75 per doz.; $12.00 per 100 by express collect.

SILVER TROPHY STRAIN MIXTURES

Before the Gold Medal strain (mentioned above) was known, the mixtures under the title of Silver Trophy, were the choicest assortment of the same specialist. It constitutes to-day a very superior selection of what is generally known as mixture, and offers the opportunity to do one's planting in shades of the same character.

Section 1. This embraces all the shades of scarlet, red and crimson, care being taken to eliminate the objectionable ones. 5c. each; per doz., 40c.; $2.50 per 100.

Section 2. The cream of all the yellow, pink, white and light shaded colors. 7c. each; per doz., 60c.; $3.50 per 100.

Section 3. Lilac, heliotrope, violet and all the shades of light and dark blue compose this selection. The colors are most exquisite. 8c. each; per doz., 75c.; $5.00 per 100.

MICHELL'S NAMED GLADIOLUS (Bulbs)

We can justly claim superiority for Michell's Gladiolus Bulbs, as many of them are grown in our own Nurseries, where we are able (due to the excellent soil) to produce plump, heavy bulbs, which are much superior to those grown usually on gladiolus farms.

CULTURAL HINTS ON GLADIOLUS

A sunny location is very essential. The soil should be one that has natural drainage, and should be thoroughly enriched with well-rotted manure. Set the bulbs out about May 1st. To get best effects, have about 6 inches of space between them They usually flower 90 days after planting. In order to have a succession of flowers until frost, make a planting about every 10 days, up to July 1st. It is advisable to purchase the bulbs at one time, as they are frequently not obtainable later in the season. While growing, bulbs should be thoroughly cultivated, and should be given a top-dressing of Sheep Manure and Bone Meal. As the bulbs begin to flower, plants should be supported with a suitable stake, to prevent them from breaking off.

Glory (*Kunderdi*). Introduced by us in 1911. It is the first of a new race with waved or ruffled petals, and this feature alone places it in a class all by itself. It has more vigor than any other variety, producing a broad deep green foliage with massive spikes, which in good garden soil grow 5½ feet high. Glory

MICHELL'S NAMED GLADIOLUS (Continued)

Mephistopheles

Mrs. H. B. Fullerton. Ruby red with white blotches; grand new variety. 50c. each; doz., $5.00.

Mrs. Francis King. A most beautiful flame pink. Immense flowers on a spike growing 4 feet high, with from 18 to 20 flowers, 6 to 8 being open at one time. Many of the bulbs produce two and three flower-spikes; a gem among gladiolus. 5c. each; doz., 50c.; $2.75 per 100.

Mrs. Frank Pendleton, Jr. One of the most exquisitely colored and formed gladiolus in our entire list. In addition, the size of bloom is not exceeded by any other. The color is a delicately flushed salmon pink, the color extending to the reverse side of the petal as well as in the centre. The blooms are wide open and are arranged individually on the very slender but wiry stems, which fall gracefully when arranged in vases. Each flower is doubly enhanced by a rich maroon blotch on the three lower petals. The most sensational gladioli novelty. 40c. each; doz., $4.00; $30.00 per 100.

Niagara. An entire new color in Gladiolus, to describe it intelligently one must imagine a shade of rich cream combined with canary yellow. The form and habit of this variety is exactly like America, except that the spike grows taller. The individual flowers are very large and borne in pairs opposite each other. 15c. each; doz., $1.50; $10.00 per 100.

Panama. On account of its habit, color and form, it is destined to become the most popular gladiolus in the near future. For form and habit, it has all the desirable features of the variety "America," but the wonderful color can best be described by comparing it with that of the popular rose, "Mrs. Jno. Laing," an incomparable rose pink. The spikes are tall and very robust and many flowers appear at one time. 25c. each; doz., $2.50; $17.50 per 100.

Mrs. Frank Pendleton

Nezinscott. Very brilliant scarlet with a deep red throat; a striking variety. 12c. each; doz., $1.00; $7.00 per 100.

Gladiolus Peace

Peace. A grand pure white flower with just a slight marking of a lilac feather on the lower petal. The plant is very robust, 5 feet high and shows the enormous flowers well placed all along the stem. 'Tis of wonderful vitality, being a splendid keeper when cut. "Peace" flowers mid-season and late, when the best of other gladiolus are gone. 20c. each; doz., $2.00; $12.50 per 100.

Pink Augusta. A grand new gladiolus, especially fine for bedding or cutting, it has all the fine characteristics of the "White Augusta," which is vigorous, has straight stems and is free blooming, and all flowers on a stem open at one time. The color is a pleasing pink and thereby fills a niche in the class of popular gladiolus. 6c. each; doz., 50c.; $2.75 per 100.

Princeps

Princeps. Amaryllis-shaped, gigantic flowers of a dazzling bright scarlet, marked with white on the lower petals. Two to three flowers open at one time. 8c. each; doz., 75c.; $5.00 per 100.

Primulinus (*Maid of the Mist*). One of the finest species from South Africa; a very thin, wiry, slender stem is decked with clear canary yellow flowers of medium size, of which but 2 or 3 are open at one time. The form of the blooms is exceedingly interesting; the upper petal being hooded, the attached two lower petals being expanded, gives it a striking appearance. For cutting or house decoration it is invaluable and most graceful. 20c. each; doz., $1.75; $13.50 per 100.

Primulinus Major Hybridus. From the original specie our grower has produced by crossing and re-crossing into the finest large flowering varieties an entire new form of gladiolus, all petals of which open wide and are of extra large size. From the purest and lightest of yellow, it varies to the deepest orange, and from the softest shade of salmon pink down to rich crimson; also a few white. Dainty blotches in the throat add to their beauty. They are borne on graceful slender stems. 6c. each; doz., 60c.; $4.50 per 100.

Rochester White. A splendid novelty, producing spikes 4 feet high, completely covered with wide open flowers of the purest white; the throat shows a light shading of whitish green, which really adds to the purity of the white. It is without doubt the finest pure white Gladiolus for cutting. 25c. each; doz., $2.50; $17.50 per 100.

Rose Spray. A giant Childsii type, pure white, with pink sprays or flakes. 10c. each; doz., 80c.; $6.00 per 100.

Shakespeare. A very dainty white, slightly suffused with rose. Well opened flowers on a long spike. Especially popular for forcing. 10c. each; doz., $1.00; 100, $7.50.

MICHELL'S HARDY GARDEN LILIES

What garden could be called complete without a fair display of these stately flowers. Their graceful habits, their ability to adapt themselves to special locations and the variety of them to have flowers almost the entire summer makes them very valuable. Their culture is simple yet a few rules must be strictly observed to grow them successfully.

All lilies should be planted from 6 to 8 inches deep, the Japanese varieties even 12 inches deep, the bulbs themselves should be completely enveloped in sand; no manure should come in contact with the bulb, but may be placed 4 to 6 inches underneath, all loose petaled bulbs should be planted on their side instead of upright.

These are sometimes grown in pots for indoor blooming, in which case they are handled much like the Bermuda Easter Lily; we recommend, however, they should be grown exclusively outdoor.

Wild gardening, a feature becoming popular of late, gives lilies the foremost place.

In winter all lilies should have a protection of leaves or manure.

WATER LILIES, Etc.

Hardy Nymphaea

Associated with ornamental subtropical plants they lend a most pleasing and charming effect to the landscape. They are also valuable as cut flowers, especially the tender varieties, both day and night bloomers. The day bloomers furnish superb flowers on long stems in red, white and blue colors. The night blooming varieties possess a charm, distinct from all others, the colors varying from pure white to pink with shades of red, carmine and crimson, which are very brilliant under artificial light. They are of simple culture, requiring a moderately rich soil, water and sunshine. The hardy varieties should be planted in May in this latitude, and on until the middle of August. The tender Water Lilies should be planted about the first of June, when warm, settled weather is assured. Varieties marked A are of moderate growth, medium to small sized flowers, suitable for tubs and fountain basins. Varieties marked B are of compact growth, suitable for artificial ponds, pools, etc. Varieties marked C are of a spreading nature, suitable for large ponds and lakes and for naturalizing.

NEW SCARLET BEDDING GERANIUM HELEN MICHELL

This charming Geranium (introduced by us in 1914) was named after the oldest daughter of the President of our house. It is by all odds the most brilliant and finest scarlet Geranium ever put on the market. The blooms are gigantic, the number of flower heads on the individual plant is remarkable. It is more vigorous and hardy than any Geranium we know of. It starts to flower early in May and continues uninterruptedly until cut down by frost. Even through the hot, dry weather it retains its brilliancy of color and great flowering qualities. It is of medium height, very compact, with lustrous, heavy foliage. The flowers are semi-double, while the individual florets are frequently 2 inches in diameter. The cut shown opposite is made from a photograph of a 4-inch pot plant. Our sales last season of this were remarkable and from all indications at the time this catalog was printed, it looks as though this year's sales will double those of last. As a pot specimen and for bedding, from the various tests it has undergone, it seems to be the peer of scarlets. The hotter and dryer the weather outdoors, the Helen Michell Geranium seems then to be at its best. We quote below a few of the many testimonials we received during the past season. This Geranium was the only new variety of plants awarded a certificate of merit at the National Flower Show, held in New York City, April, 1913.

TESTIMONIALS ON GERANIUM "HELEN MICHELL"

Jenkintown, Pa.

Having won the $50.00 gold prize, which you offered for the best 4-in. specimen plant of Geranium "Helen Michell" at the N. Y. exhibit, June 19, 1914, from all observations, I feel safe in saying that the variety is the freest bloomer and the best grower, surpassing any other geranium I know.

WM. ROBERTSON.
Gardener to John W. Pepper, Esq.

Office of Laurel Hill Cemetery, Philadelphia, Pa.

The Helen Michell Geraniums, purchased from you this year, gave us great satisfaction. It is a strong vigorous grower and a very free bloomer. We intend to plant it extensively next year.

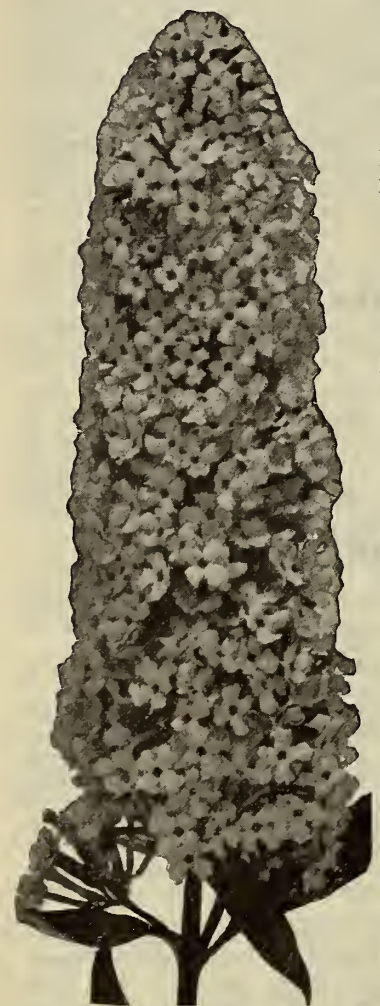
Supt. Gardener.



A Flower Head of Buddleya Asiatica

BUDDLEYA ASIATICA

The wide prominence gained by Buddleya Magnifica, otherwise known as Butterfly Bush (which we were responsible for) should establish for this white flowering variety a ready sale. In the latitude of Pennsylvania it is not hardy over winter, if planted outdoors, but as greenhouse shrub it is a novelty. Young plants which we offer here, can be set out in the spring and produce the first season specimens that will flower freely. On the approach of first frosts, the plants can be lifted and cut back and wintered over in a cool cellar. An occasional watering during winter, just enough to keep the plant alive, will enable one to set out a large plant the following spring and it can be handled the same way, year after year, unless new plants are made, which can be done by the cutting process. If one has a heated conservatory or greenhouse, the old plants, referred to, can be started January 15th. By Easter or after they should bloom. The temperature that suits Carnations will answer for Buddleya Asiatica. It produces long spikes of white scented flowers, similar to the odor of Lilacs. We sent a number of these plants to the south, but have not been able to ascertain that they were hardy. It is our belief though that with winter protection the plants will winter below Virginia without loss. Strong plants in 2½-inch pots, 35c. each; dozen, $3.50; $25.00 per 100.

CHRYSANTHEMUMS (*P*)

Early Frost (Dorner). A very early fine white variety, a cross between Golden Glow and October Frost. Height, 3 feet. Pure white, with incurved petals of perfect form and full to the center. It has the habit of Golden Glow to set early buds, which develop into large blooms. **2¼-inch** pot plants, 30c. each; doz., $2.50; $20.00 per 100.

Golden Queen (Smith). A fine yellow, the same shade as Golden Glow, maturing early in October. It is a seedling from Chrysolora, but much superior, being 10 days earlier; of fine incurved form; very double. The best bud should be taken August 10th; 6 inches in diameter; 3½ feet high. 2¼-inch pot plants, 75c. each; doz., $7.50; $45.00 per 100.

Marigold (Smith). The most phenomenal yellow Chrysanthemum in existence, brighter than Golden Wedding. Wonderful exhibition flower, invariably 9 inches in diameter; matures October 15th, growing 5 feet high. The best buds are secured the latter half of August. 2¼-inch pot plants, 75c. each; doz., $7.50; $45.00 per 100.

Modello (Smith). A variety of striking color, resembling golden bronze or amber. It is of huge size, growing 4 feet high, maturing the first week in November; buds selected early in September make the best flowers. 2¼-inch pot plants, 75c. each; doz., $7.50; $45.00 per 100.

ROSES—Forcing Varieties (Ready in March)

Mrs. F. F. Thompson (Totty). This variety sported from Mrs. Geo. Shawyer some three years ago and is an exact duplicate of that variety in all respects except color, a lovely shade of shell pink with a deep glowing heart of bright pink, which lights up the flower wonderfully. It is a persistent bloomer, flowering all the time. **Either grafted or budded 2¼-inch pot plants,** 75c. each; doz., $7.50; $12.50 for 25; per 100, $40.00.

White Shawyer (Totty). A pure white sport of Mrs. Shawyer which has been eagerly looked for. It is a wonderfully free bloomer. **Either grafted or budded 2¼-inch pot plants,** 75c. each; doz., $7.50; $12.50 for 25; 100, $40.00.

September Morn (Turner) (T). Has a splendid free growth, running to 2 to 3 feet without pinching and showing every sign of being a phenomenal rose. The bud is rather short and the outer petals are fimbriated, giving the flower a novel appearance. September Morn is the most sweetly scented of any Rose so far placed on the market. **Either grafted or budded 2¼-inch pot plants,** 75c. each; doz., $7.50; $12.50 for 25; per 100, $40.00.

Hoosier Beauty (Dorner) (S). A rich velvety crimson in color with deeper shadings. It is as fragrant as Richmond, has more petals and better keeping qualities. It naturally throws 2 and 3 feet stems; never has a dormant period, starting new growth very quickly at any time of the year. The glowing color, sweet scent, well-shaped buds, large, full flower, long keeping qualities, clean, healthy habit and freedom in growth and production of bloom have been declared wonderful. It is also easy to propagate. **Grafted plants only.**

Michell's Chrysanthemums and Carnations

FOR INDOOR CULTURE—NEW AND STANDARD VARIETIES

CARNATION PLANTS (Ready February 1st)

We have arranged with the best grower in America to produce most of this stock for us, while the balance we grow ourselves at our Nurseries at Andalusia, Pa.

SPECIAL NOTE.—This year we are offering Carnations from 2¼-inch pots, also in the shape of rooted cuttings. We recommend pot plants, as they are so much more satisfactory to ship and handle than rooted cuttings; the latter, however, we can supply at lower prices than the pot-grown stock.

Beacon. The best scarlet variety. Our stock is clean and fine.

Benora. Flower large, full, and of perfect form. Color cream white, beautifully penciled with bright red.

Christmas Cheer. Rich geranium red, a splendid variety for pot or house culture, bearing medium-sized flowers.

Enchantress Supreme. A light salmon pink, which endures exposure to the sun without bleaching. The calyx is long and has shown no tendency to burst. Plants from 2¼-inch pots, each, 15c.; $1.00 per doz.; $8.00 per 100.

Enchantress. Shell pink. Our stock of this is excellent.

Eureka. Scarlet seedling from Beacon. Habit similar to Beacon; flower a trifle smaller with better calyx.

Gloria. Beautiful silver pink; very fine. Rooted cuttings, 15c. each; doz., $1.00; $8.00 per 100. 2¼-inch pot plants, 20c. each; doz., $1.50; $12.00 per 100.

Gorgeous. Rich glowing crimson, suffused vermilion. Rooted cuttings, 15c. each; doz., $1.00; $8.00 per 100. 2¼-inch pot plants, 20c. each; doz., $1.50; $12.00 per 100.

May Day. An excellent commercial variety. It is very free, and its even shade of pink is much desired.

Matchless. Pure white, without a trace of any other color. Rooted cuttings, 15c. each; doz., $1.00; 100, $8.00. 2¼-inch pot plants, 20c. each; doz., $1.50; 100, $12.00.

Mrs. C. W. Ward. In color a very pleasing shade of pink, slightly lighter than Mrs. Lawson. In growth it is all that could be desired, being thrifty and clean, and making an abundance of flowering shoots.

Philadelphia. True rose pink; large well-formed flowers. Rooted cuttings, 15c. each; doz., $1.00; 100, $8.00. 2¼-inch pot plants, 20c. each; doz., $1.50; 100, $12.00.

Princess Dagmar. The deepest red or crimson in existence. Rooted cuttings, 15c. each; doz., $1.00; $8.00 per 100. 2¼-inch pot plants, 20c. each; doz., $1.50; 100, $12.00.

MICHELL'S HARDY HYDRANGEA HORTENSIS

This class of Hydrangea is the one which is seen planted so extensively at the North Atlantic seashore and inland resorts. It seems to do especially well in these localities. It has been the general opinion that the plant is not hardy, but in many places it is not afforded even the slightest protection, although we recommend that care be taken, especially the first few years after planting, to protect them over winter with a covering of manure or other suitable litter, as this will protect the flower buds, which are often injured in severe winters, although the plants otherwise do not suffer. If winter protection is used, same should not be removed until all danger of frost is over, otherwise the tender shoots are nipped in the cold nights of early spring, and few flowers are the result. The varieties of Hydrangea often change their color; for instance, pink varieties will sometimes turn out blue. This, however, is infrequent, and when the type is fixed it usually remains so. If, however, it is desired to change pink Hydrangea blue, and the latter pink, this can be usually accomplished by incorporating into the soil a few handfuls of soot or iron filings. If this is not obtainable, lump alum broken into small pieces and incorporated into the soil, about ¼ lb. to each plant, will usually produce the same results. This class of Hydrangeas is best planted around verandas for fine effects. They can also be set in tubs for wall, coping or lawn decoration. If used in the latter way the plants should be taken in in the winter to a frost-proof cellar and occasionally given some water. We have added considerably to our list, and offer an up-to-date selection. **Special Note:** This class of Hydrangeas in the summertime should be watered liberally every day when there is no rain. Application of Cow Manure, Sheep Manure or Bone Meal will greatly increase the flowering qualities.

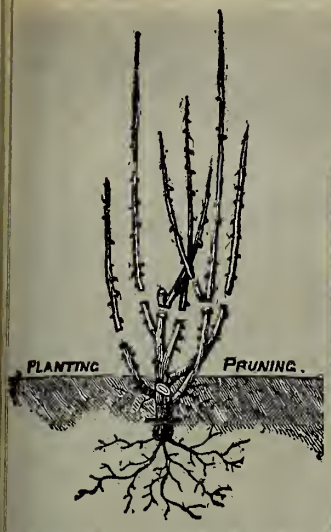
MICHELL'S SUPERB POT-GROWN ROSES, 2 YEAR OLD PLANTS



Note the proper way to plant and prune a rose bush. See the separation where the pruning is indicated.

Our stock in this line will be found of unusual vigor and value. The soil that we use for potting them is especially prepared and seems to contain peculiar elements which induce extra strong growth. The field-grown stock is potted late in the autumn after the wood is thoroughly ripened. They are plunged in the sand to prevent the roots from drying out at any time. Then they are placed in especially constructed glass houses without heat. In this manner they winter over under natural conditions, until planted in your own garden. Roses handled after this fashion cannot help to give the greatest satisfaction to the purchaser.

SPECIAL DIRECTIONS FOR PLANTING AND CARING FOR ROSES

Open a good space in the soil and spread out roots; never cramp them into a small hole. Do not let manure come in contact with roots but place it underneath and a layer of soil on top. If the rose is a bush plant, set it so deep that only branches are visible above the ground and never the main stem, but too deep is as bad as too shallow; 2 to 4 inches of the lower branches may be under the surface, but no more. If the plant is a budded or grafted rose, be sure that the bud or graft is fully 3 inches below the surface. Prune in spring only, when life is just apparent and remove what might appear to be surplus wood. The strongest growth should be cut back to within six inches above the ground; the weaker growth to 4 inches. Observe the illustration opposite for pruning and depth of planting: All soil above the roots should be well pressed down. Feed your roses with "Ground Bone" and "Pulverized Sheep Manure." Mulch the ground during summer. As winter approaches draw soil 6 to 8 inches high around the stem, this avoids winter killing especially the H. T. varieties, then cover with long manure or similar litter. Spray as soon as growth commences and continue once a week with "Bordeaux-Arsenate," see page 220. The only remedy against the rose-bug is Readeana, this positively destroys them and does not injure the flower or blossom. (See page 221). See page 228 for books on Rose Culture.

RECENT INTRODUCTIONS OF HARDY EVERBLOOMING HYBRID TEA ROSES

HT **British Queen** (McGredy). Experts, who have seen British Queen growing, agree that it is the finest white Rose in existence, surpassing in beauty and elegance of form all other white varieties. The freedom with which it blooms is remarkable. It is in flower from June until winter, and on well-cultivated plants the blooms are a model of perfection. The type of flower is between White Maman Cochet and Frau Karl Druschki, with Tea Rose form and refinement; frequently in the bud state it shows a slight flush; this disappears as the flower opens to the purest whiteness. It is a good grower and sweetly scented. Awarded a Gold Medal by the National Rose Society of England. $1.00 each; per doz., $10.00.

HT **Earl of Gosford** (McGredy). A splendid dark crimson rose, much after the style of Victor Hugo, an erect grower, bearing its flower on strong stiff stems; this is very fragrant and sure to become one of the most popular roses grown; color a rich deep crimson. Price, $1.00 each; per doz., $10.00.

George Dickson (Dickson & Son). We are quite satisfied that within two years George Dickson will be the most popular exhibition Rose in existence. As near as we can describe it, the color is a velvety-black crimson, the back of the petal being heavily veined with deep pure crimson-maroon. The petals are of splendid shape and of magnificent substance; delightfully smooth, and built to make the form of flower perfection. Blooms, of the highest exhibition standard, quite five inches across. It has wonderful lasting qualities, not only as to the retention of its color, but also in its shape and freshness. Awarded the Gold Medal of the National Rose Society of England, besides many other first awards at various shows in England. $1.00 each; per doz., $10.00.

HT **Mrs. George Shawyer.** An introduction of 1913 and reputed to be the finest pink rose without a fault. It is wonderfully free flowering, even more so than Killarney. It is a strong, vigorous grower, with massive flowers, and a variety that should be included in every collection of roses. $1.00 each; per doz., $10.00.

HT **Mad. Edward Herriot.** This rose was the sensation of 1914. It is the winner of the gold cup, offered by the London Daily Mail, for the best new rose exhibited at the International Exhibit, held in London in 1912. The variety is frequently referred to as the Daily Mail Rose. It is a cross between a seedling of Caroline Testout and a variety of the Pernitiana class. The buds are coral red with yellow shading at the stem. The flowers are semi-double, of medium size of coral red color, shaded yellow and scarlet, terminating in salmon-red. It is one of the finest roses in cultivation. Price, $1.50 each.

HT **Willowmere.** The bud is carmine, which when open, develops into a large flower of rich pink, shaded yellow in the centre. Resembles the wonderful Lyon Rose. Price, $1.25 each.

HT **Ophelia.** Very large flower of fine form and habit; salmon flesh shaded pink; the flowers are borne freely on stiff stems. Price, $1.00 each; doz., $10.00.

HT **Old Gold.** Coppery red, shaded apricot; a remarkable color; is not resembled by any other rose. The foliage is heavy and the growth vigorous; it blooms very freely. Price, $1.25 each.

Mrs. Charles Russell. A strong growing, free flowering Rose. The foliage is heavy and leathery, is almost mildew proof. The bud is fully as large as American Beauty, but longer and pointed. The color is a bright rose pink, deeper toward the centre. $1.00 each; per doz., $10.00.

Hybrid Tea Rose, British Queen

The opposite illustration shows one of our rose storage houses, where the plants are put, after being potted, in the late autumn, to develop under ideal, natural conditions. There is just sufficient heat in them to temper the atmosphere in extremely cold weather and as a consequence roses wintered under these conditions are almost in the same dormant state as those grown naturally outdoors. As the weather becomes mild in the spring, the sashes are taken off the houses and the plants are allowed to develop until sold. We have five houses like this, three being 120 feet long by 22 feet wide; and two being 100 feet long by 28 feet wide. They have a combined capacity of approximately 50,000 rose plants in 6-inch pots.

HT **Dean Hole.** One of the best roses for midsummer, being loaded with flowers during July and August. The color is very attractive, being deep salmon pink with tremendous flowers.

HT **La France.** Satiny rose, with reflexed petals, which are of a darker pink on the reversed side.

HT **Lady Ashtown.** Delicate rose with a trace of yellow at the petal base. The outer flower leaves expand, while the centre petals remain in exquisite bud form.

With proper care these will flower uninterruptedly and profusely from June till heavy frosts. Their foliage is leathery and very clean; the flowers are borne on strong, extra long stems, their fragrance is deliciously sweet. While they are absolutely hardy, we recommend a covering of long old manure, leaves or straw during the winter, also that the soil be drawn up about the plant 6 or 8 inches at the stem. Varieties marked HT are more hardy than the varieties marked T, which indicates the old-fashioned Tea sorts. The latter, on the other hand, flower a trifle more freely, though no disappointment would follow in a selection of either type exclusively.

MICHELL'S HYBRID PERPETUAL HARDY ROSES

These differ in character from the Tea sorts in that they produce their crop of flowers for the most part in June and during the following months occasionally a few blooms. The flowers are of immense size, very double and the real old-fashioned rose odor. They deserve a place in every garden, where roses are a feature. The plants are very strong growing and after flowering should be cut back slightly. This induces new growth of wood for the following season, making them more bushy. On the first approach of lasting spring weather the plants should again be pruned back to within 8 or 10 inches of the ground, when a marvelous rose crop will follow. They are extremely hardy and need no protection.

PINK VARIETIES

American Beauty. The rich deep pink, with an odor entirely distinct. With a little care such as watering in dry weather and a covering of manure in winter these live for years.
Baroness Rothschild. Soft delicate pink, very large.
Captain Christy. Delicate flesh pink, very free.
Clio. Delicate flesh color, shaded deep pink in the centre.
George Arends. This is a clear pink variety of the Druschki type. It is frequently referred to as the pink Druschki Rose.
President Kruger. Rich velvety crimson.
Madame Gabriel Luizet. Pale pink, very sweet.
Magna Charta. One of the largest; color deep pink.
Mrs. John Laing. Soft pink, very fragrant and large.
Mrs. R. G. Sharman Crawford. The finest light pink rose.
Paul Neyron. The largest of all roses, deep rose.

RED VARIETIES

Fisher Holmes. Bright scarlet, shaded deep maroon.
General Jacqueminot. The old favorite; velvety crimson
Prince Camille de Rohan. Deep velvety crimson maroon.
Ulrich Brunner. Bright cherry red, flowers large and full.
Baron de Bonstetten. Velvety red, almost black; a vigorous grower; large, double, sweet-scented flowers.

WHITE VARIETIES

Frau Karl Druschki. An exquisite flower of the purest white.
Margaret Dickson. A very large, pure white; the best of its color in the Hybrid Perpetual class.
Gloire de Lyonnaise. White, with a slight trace of yellow; very large full flower. One of the best in this color.

Price of any of the above extra strong, 2-year-old plants, **50c. each; $5.00 per doz.; per 100, $35.00.**

Hybrid Perpetual Rose, Mrs. John Laing

Rosa Wichuriana makes a handsome wall decoration

AUSTRIAN BRIARS AND HYBRIDS

Rather a distinct class, being of wonderfully strong growth, and flowering in the early summer and again somewhat in the late summer and early fall.

Juliet. This rose is a favorite wherever seen, and cannot fail to give satisfaction; in Britain it is one of the principal cut flower varieties. The color is a rich vermilion red, the reverse of the petals old gold. It is a strong, erect grower and delightfully fragrant.
Persian Yellow. Very hardy, producing medium sized flowers of a rich deep yellow. Very double.
Soleil d' Or (*Golden Sun*). Varies from golden orange to reddish gold, large, full, perfectly double flowers and a continuous bloomer.

Price of any of the above extra strong, 2-year-old plants, 50c. each; $5.00 per doz.; per 100, $35.00.

ROSA WICHURIANA (The Creeping or Memorial Rose)

The long slender stems which are completely dressed with small glossy deep green foliage trail to any rock, ground, trellis or wire and often grow 20 feet in one year. During their flowering season the foliage is entirely hidden by the wealth of fragrant blossoms. For cemeteries they are ideal, as they flower about the end of May. Rockeries, terraces and bare spots in gardens cannot be more readily beautified. We send out extra strong plants only.

	Each	Doz.
Alba Rubraefolia. Large, double pure white flowers, the shining green foliage is tinged with bronzy red	$0.50	$5.00
Gardenia. Buds bright yellow, open double cream-colored flowers	.40	4.00
Wichuriana Type. Single white flowers	.40	4.00

Tree or Standard Rose—Frau Karl Druschki

STANDARD or TREE ROSES

There is a demand for these and we have confined ourselves to seven of the most popular kinds, which includes some of the Tea varieties and Hybrid Perpetuals. In Europe they are planted more extensively than the bush. They are budded plants and we recommend that the stems or trunks are slightly protected during winter. This can be accomplished with either paper or straw or they can be bent down carefully and the trunk covered with suitable litter. While this is not essential, it is a wise course to follow in wintering tree roses.

HT **Mme. Jules Grolez.** Delicate silvery rose, tinted yellow at the base.

HT **La France.** Satiny rose, with reflexed petals, which are of a darker pink on the reverse petals.

HT **Killarney.** In shape nothing can approach this beautiful rose, its long perfectly shaped bud which on the outside is of a delicate pink unfolds a flower with a deeper pink on the inside.

HT **Gruss an Teplitz.** This is often termed the reddest of the red roses. The foliage, which takes on a coppery red color, is almost hidden with masses of flowers, the centre of which are light red, while the outer petals are crimson red.

HT **Frau Karl Druschki.** Very large flower; pure waxy white. This is sometimes referred to as the white American Beauty. We can recommend this variety in highest of terms to every lover of roses.

HP **Paul Neyron.** Deep rose pink, producing flowers of an enormous size; very double.

HP **Ulrich Brunner.** Bright cherry red; large full flowers of rich fragrance.

Price of any of the above Standard or Tree Roses, fine pot-grown plants, $1.25 each; doz., $12.00. One each of the above seven varieties for $7.00.

DWARF, BABY RAMBLER, or POLYANTHA ROSES

For bedding, simply to produce a flowering effect, these give remarkable satisfaction. They are not much for fragrance or cutting, but the large panicles of flowers are appearing continuously from June until severe frost. They are best when kept pruned to a height of about 2 feet, at which size they develop into handsome, shapely bushes.

Madame Norbert Levavasseur (*Crimson Baby Rambler*). This is identical with the Crimson Rambler in color and form, except that it is probably more intense red.

Katherine Zeimet (*White Baby Rambler*). Pure white, with yellow stamens. Makes a variety of color when planted in with pink or scarlet.

Mrs. W. Cutbush (*Pink Baby Rambler*). A cerise pink; a persistent bloomer, with very double flowers.

Annchen Müller. Brilliant rose pink flowers, produced in enormous clusters. The flower petals are somewhat frilled, which make it especially attractive.

Louise Walter. Soft blush pink, almost the exact shade of the variety "Tausendschoen." The flowers are larger than most of the other varieties, but are fewer in number.

Orleans. Rich brilliant red flowers, which turn to pink as they become older. The centre of the flower is white.

Erna Terschendorff. The true scarlet Baby Rambler, decidedly the best colored one in this class and holds its color for a long while, without fading.

Jessie. Bright orange red flowers, almost single, produced in clusters in great abundance.

Phyllis. One of the best Baby Rambler. The color is a beautiful carmine pink; a continuous bloomer and very hardy.

Price of any of the above, **50c. each; doz., $5.00; $35.00 per 100.**

The Baby Rambler is one of the best Roses for bedding

Moss Rose

MOSS ROSES

In our grandmother's garden the Moss Rose was considered the finest flower. When in bud form, these are unusually attractive; the base of the flower is covered with what seems to be a delicate mossy growth. We do not recommend heavy pruning of Moss Roses, as a slight thinning out of the wood, in the season after they have flowered, is sufficient.

Blanche Moreau. An exquisite pure white variety, producing large flowers.

Crested Moss. Deep rose pink; remarkably attractive flower.

Crimson Globe. Rich deep crimson, large full flower.

Price of any of the above, extra strong 2-year-old pot-grown Moss Roses, 50c. each; doz., $5.00.

ROSA RUGOSA (Japanese or Shrubbery Rose)

Very robust with deep green puffed foliage and produces semi-double and double flowers in profusion during June. In fall and winter the plants are covered with bright red, large berries; an excellent plant for a shrubbery bed or a solid hedge.

	Each	Doz
Alba. Single white	$0.35	$3.50
Blanc Double de Coubert. Large double pure white	.50	5.00
Conrad Ferd. Meyer. Double, light pink	.50	5.00
Rubra. Crimson carmine, single	.35	3.50

LARGE FLOWERING CLIMBING ROSES

American Pillar. Single, flowers large, 2½ to 3 in. in diameter, of a rich shade of pink with a distinct white centre, produces immense clusters, being very showy and attractive. The growth is exceptionally strong, foliage a shiny dark green, and insect-proof. An additional attraction in autumn are the clusters of red seed berries. Extra strong, 2-year-old plants, 50c. each; doz., $5.00.

CLIMBING ROSES (*Continued*)

Christine Wright. One of the new varieties, and a cross between the popular Hybrid Tea, Caroline Testout and a seedling. This rose when more widely known will be extensively planted. The color of the flower is a bright rose-pink, measures 3½ to 4 inches across, is of perfect form, beautiful in the bud and acceptable in the fully developed flower. During June it is at its best, but continues to give flowers throughout the entire season. This is sure to give satisfaction. We offer extra strong plants at 60c. each; doz., $6.00; $45.00 per 100.

***Climbing Kaiserin Augusta Victoria.** This possesses all the qualifications of the dwarf Kaiserin, particularly the freedom of bloom, exquisite odor, and the fine shade of white. Extra strong, 2-year-old plants, 50c. each; doz., $5.00; $35.00 per 100.

***Climbing Killarney.** Delicate soft pink, identical with the dwarf variety, bearing the same name. As the flower unfolds, it shows a shade of deeper pink on the inner petals. Extra strong, 2-year-old plants, 50c. each; doz., $5.00; $35.00 per 100.

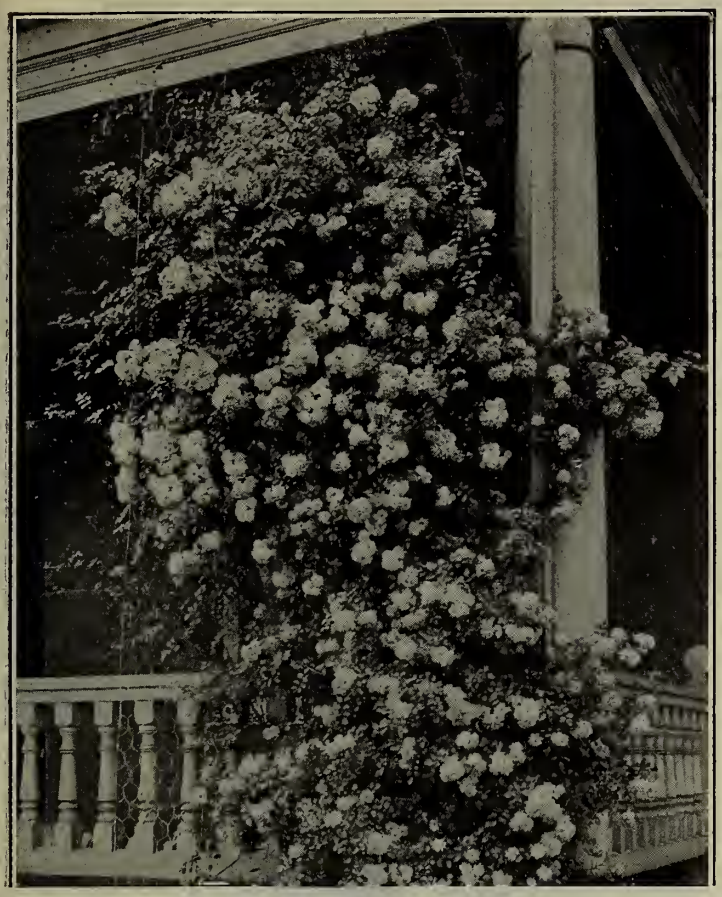
***Climbing Lady Ashtown.** Delicate pink, with a slight trace of yellow at the petal. While the outer petal expands, the center remains in bud form. 60c. each; per doz., $6.00; $45.00 per 100.

Climbing American Beauty. A rose which has come to stay. Climbing American Beauty is a decided acquisition, possessing the deep pink color of one of its parents (American Beauty), and also its very delightful fragrance. We have here a combination of qualities very rarely found in this class of Roses. It often makes canes 15 feet long in a season; the flowers are 3½ to 4 inches in diameter and produced in great profusion, not only during May and June, but off and on all summer. Extra strong plants, 60c. each; doz., $6.00; $45.00 per 100.

***Climbing La France.** Satiny rose, with reflexed petals, which are darker pink on the reverse side. The climbing form of this variety is equally satisfactory as the dwarf one. Extra strong 2-year-old plants, 60c. each; doz., $6.00; $45.00 per 100.

Reine Marie Antoinette. Cherry red; frequently referred to as the red Gloire de Dijon. It is an exceptionally good variety and will please every one, who favors climbing roses. In the latitude of Philadelphia this sort must be carefully protected in the winter, to insure its permanency. Extra strong, 2-year-old plants, 50c. each; doz., $5.00; 100, $40.00.

Rosa Rugosa



Climbing Rose "Lady Gay"

Aviator Bleriot. Improved yellow Rambler. A vigorous grower with dark green, glossy foliage, which seems to be immune to attacks by insects and disease. It produces large clusters of double, deep sulphur yellow flowers, darker yellow, almost an orange shade in the centre. It is a variety which will appeal instantly to all lovers of climbing roses.

Baltimore Belle. An old favorite with blush flowers, borne in large clusters.

Crimson Rambler. This well-known variety produces in abundance large clusters of crimson flowers. Strong plants, 50c. each; doz., $5.00. Extra strong 3-year-old plants, 75c. each; doz., $7.50.

Dorothy Perkins. Pink flowers in long sprays which are very fragrant and lasting; a deservedly popular rose.

Excelsa (The Crimson Rambler par excellence). This variety supersedes to a great extent the older Crimson Ramblers, not only by reason of its intense crimson-maroon flowers, which are tipped with scarlet and are very large for a rose of this type, but because of its healthy lustrous foliage, which is free from mildew. It is a very free-flowering rose, its blossoms breaking from almost every eye in clusters of from 30 to 40 flowers.

Flower of Fairfield (The everblooming Crimson Rambler). Exactly like the Crimson Rambler in appearance, except Flower of Fairfield blooms periodically during the summer. It is very vigorous; many new growths made each season. Extra strong 3-year-old plants, 75c. each; doz., $7.50. Strong plants, 50c. each; $5.00 doz.

Hiawatha. Single brilliant scarlet, with a yellow circle around the centre, flowering in large clusters. Most dazzling and effective. The foliage is retained until very late in autumn and always presents a clean, bright green, healthy appearance; should be on every pergola, though it is attractive when supported on a single stake.

Price of any of the Climbing Roses on this page (except where noted) in strong 2-year-old plants, 50c. each; doz., $5.00; $35.00 per 100.

Since the introduction of the Crimson Rambler, Climbing roses have made rapid strides in popular favor. A great number of varieties have been put on the market since then, some of which we have found by careful trial to be of exceptional merit. They are of strong, robust growth, often making shoots 20 feet long in a single season, and when in flower are truly a magnificent sight. We offer only the best sorts in heavy 2-year-old plants.

Note.—Climbing roses do not require annual pruning, as do the H. P. and H. T. varieties. A good thinning out, though, of the surplus wood in the early spring, or after flowering time is advisable. In pruning the climbing Roses, which are of a H. T. nature, such as are marked with an * (see page 146), if the weak, thin wood is cut out entirely, and the strong shoots are cut back somewhat, they respond marvelously with a wealth of bloom. Climbing roses produce their main crop of flowers in June.

Lady Gay. Cherry pink buds, which when open are of a soft white color; very free flowering; extremely useful variety.

Silver Moon. Gigantic pure white flowers (resembling somewhat a Clematis bloom), frequently 5 inches in diameter. This is the ideal climbing rose for planting along fences, while for pillar and trellis work it is equally satisfactory. It has a delicate rose scent, and the flower stems are frequently 15 inches long. The foliage is rich green, at times shaded bronze. The flowers are especially attractive in the evening and even in the dark they stand out conspicuously; we judge from this fact alone, it has received its name. Extra strong, 2-year-old plants, 75c. each; doz., $7.50; $50.00 per 100.

Tausendschon. We cannot too highly recommend this rose on account of its free-flowering qualities and its exquisite shade of soft pink, which changes to a rosy carmine when fully open. These flowers are borne in large sprays of from 10 to 15 flowers each, individual flowers measuring quite 3 inches across. For pergolas or pillars it has few equals.

White Dorothy Perkins. The best white Rambler Rose yet introduced, being an exact counterpart of Pink Dorothy Perkins, excepting color; a desirable rose. Extra strong 3-year-old plants, 75c. each; $7.50 doz. Two-year-old plants, 50c. each; doz., $5.00.

MICHELL'S NOVELTIES IN PERENNIAL PLANTS

Our Plant Establishment makes a specialty of Perennials and is in charge of an expert in that line. During the past season we have greatly increased our facilities and our list of hardy plants is a representative one. We devote to this class of stock some 39 acres and have now established for the benefit of customers a permanent border of perennials, wherein is planted some of every variety of hardy plants and roses, listed in this catalog During the spring, summer and autumn plants, our customers or whoever is interested, will find a visit to our Nurseries not only interesting, but very instructive. All plants are carefully labeled in our trial beds, so that one can take his own time in making notes and observations. Our Nursery Superintendent will be glad to have a competent person lend any assistance, or give information that might be desired. Your trade in the line of perennial plants is especially solicited.

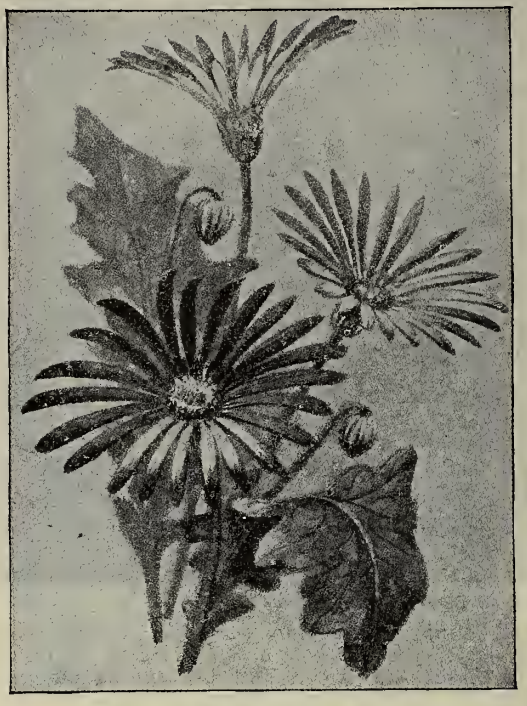
Type of Hardy Border Carnations, frequently as large as those grown in greenhouses

HARDY BORDER CARNATIONS

The popularity of Carnations has increased enormously during the last few years, and were it not that a greenhouse is in most cases necessary, they would most assuredly bid fair to eclipse the rose and become the Queen of Flowers. The chief object of the introducer of these perpetual flowering Carnations has been to secure hardiness and vigor of constitution, combined with free-flowering qualities. This class embraces a marvelous range of color, running from pure white through all the delicate shades of pink, from light to darkest shade of yellow, covering also all the light and dark shades of red. Our stock will produce about 80 per cent. of double flowers, though the single ones are attractive and preferred by many. The plants should be procured and set out as early in April as possible. They thrive in any ordinary, good garden soil; one that has good, natural drainage. At the approach of winter a covering of leaves will be found of benefit to carry them through safely. Strong plants, that will bloom the first year, in mixed colors, as above described, 25c. each; doz., $2.50; $17.50 per 100.

Stock limited and we predict a big sale for these.

GERBERA JAMESONI HYBRIDA (Transvaal Daisy)



Gerbera Jamesoni

Strictly speaking this might be called a tender perennial, as it requires wintering over in a cold frame. For grace and beauty we know nothing that can approach it. The daisy like flowers, which cover the various colors of red, orange, yellow and pink, appear freely on low growing plants, the stems being about 18 ins. long. It is very desirable as a cut flower, lasting quite a while in water. It flowers very easily in a cool greenhouse or conservatory.

Strong plants, to bloom the first season, 35c. each; doz., $3.50.

IRIS INTERMEDIA

An entirely distinct type, being a cross between a German Iris and a shrubby Iris, known as the Pumila type. It is medium early to bloom, flowering in between Iris Pumila and Iris Germanica. Plants grow about 18 inches high and are surmounted with large flower heads, on spikes, which grow well above the foliage; appearing in May.

Ceres. Standards and fall pearl white; orange beard.

Charmant. Standards, silvery white; pearl falls, with deep blue markings.

Walhalla. Standards, light blue, violet blue falls; yellow beard.

Price of the above, 30c. each; doz., $3.00.

LYTHRUM

Salicaria, Brightness. This variety produces long, graceful spikes of brilliant rose pink flowers. Stems about 4 feet long. A desirable plant for borders or massing near streams or lakes. Exceptionally hardy and fine for cutting. Blooms July until September. Strong plants, 25c. each; doz., $2.50.

Virgatum Rose Queen. The long flower spikes of a most telling shade of rose are wonderfully bright and produced in remarkable abundance. A batch of this in our nursery was a source of admiration from July until September to all who saw it. This is by far one of the brightest colored of the popular "Loose Strife." Grows 3 to 4 feet high. Strong plants, 25c. each; doz., $2.50.

MONARDA (Bergamot)

Salmonea. A splendid new variety, covered in July and August with long flower stems crowned with beautiful salmon pink heads. The foliage has an exclusive pleasing odor. It grows 2 to 3 feet high and makes a handsome show. Price, 50c. each; doz., $5.00.

Pyrethrum Queen Mary

PYRETHRUM

These are among the showiest of the hardy perennials; for cutting nothing surpasses them. The following two varieties are among the latest introductions.

Queen Mary. Shown before the R. H. S. of England, this variety created a sensation and was unanimously voted an award of merit. The color is a bright peach pink, of a pleasing and distinct shade, altogether a new color in this class of plants. The flowers are large and very double, blooming in July and August. Strong plants, 50c. each; doz., $5.00.

Lord Roseberry. Brilliant crimson scarlet, almost a dazzling shade. The large flowers are very full and are produced on long stiff stems, making it a gem for cutting. Strong plants, 50c. each; doz., $5.00.

See top of next column for description of this Lupinus.

LUPINUS ARBOREUS (Tree Lupin)

Somerset. Grows in a fine bush form and is literally covered with spikes of soft yellow flowers, about 4 feet high. This variety is entirely separate and distinct from the Polyphyllus type, with which however it masses readily. A grand border plant and extremely valuable for cutting; flowers in July and August. Strong plants, 35c. each; doz., $3.50.

SALVIA

The hardy varieties of this plant are coming into great favor by reason of their beauty and freedom of bloom during the summer.

Uliginosa. A beautiful, late flowering species of an attractive shade of blue with a distinct white eye. This variety was shown in the autumn of 1913 before the Royal Horticultural Society of England, and was greatly admired and received an award of merit. The plant is of upright habit, branching, and with us grows about 5 feet high. It blooms freely and flowers practically at every axil. All who have seen it, at our nursery during the summer and autumn, were impressed with its unique and distinct beauty. Strong plants, 50c. each; dozen, $5.00.

Greigi. This novelty is an extremely useful plant, growing into a symmetrical, hard-wooded shrub, 2½ to 3 feet high. The pretty soft cerise crimson flowers are produced in such abundance as to completely hide the foliage. It blooms the entire summer and is quite hardy. Strong plants ready in May. 35c. each; doz., $3.50; $25.00 per 100.

Viburnum Carlesi

VIBURNUM CARLESI

A beautiful new Japanese Snowball of recent origin. The flowers are large, pure white and borne in loose panicles quite unlike the "Plicatum" and "Opulus" sorts. It rather resembles a head or truss of the Bouvardia flower; it has an exquisite odor, and is valuable for cutting. It does not grow quite so rank as the common varieties, and should be included in every shrubbery collection. Strong plants that will bloom the first year. 75c. each; doz., $8.00.

MICHELL'S EARLY FLOWERING HARDY CHRYSANTHEMUMS

Last year we offered these in our Catalogue for the first time and in the spring marveled at the heavy demand for them. It became, however, very clear to us this autumn, when we had the opportunity of comparing them with the other types of hardy Chrysanthemums, to realize why they sold so readily. Last season we procured our stock from a leading grower in England and offered them on the strength of his recommendation. Especially on that account we were pleased that they fulfilled all claims made for them. The plants are of dense compact growth and are literally covered with flowers.

Private gardeners and others, who are not yet acquainted with this type of Chrysanthemum, on seeing them for the first time, will realize at once their wondrous beauty and free-flowering qualities. Although they are principally cultivated as an outdoor plant, they respond wonderfully when grown inside.

The varieties of these, which we list, are the cream of European sorts, and are a wonderful advance on the popular Pompon types. They are chiefly conspicuous by the fact that they commence to bloom as early as August and continue in flower until cut down by severe frost. The blooms of most kinds measure as much as 3½ to 4 inches across, and if disbudded, form handsome specimen blooms on long stems, admirably adapted for decorative purposes. We predict that when these become better known they will entirely supersede the smaller type of hardy "mums" now in general use.

Normandie

Le Pactole. A vigorous grower, yielding a very large flower of a bronze-yellow shade. It is a fine variety for cutting, as it shows off well under artificial light.

Madame Marie Masse. A lovely shade of lilac mauve; a variety that will appeal instantly to all lovers of Chrysanthemums. Commences to flower in September.

Mrs. A. Beech. A distinct shade of bronze, flowering in October.

Mabel Roberts. Beautiful deep pink flowers, produced in long, erect sprays; blooming in September and October.

Normandie. Delicate pink of a lovely shade. One of the earliest, beginning in August and lasting well into October.

Orange. A terra-cotta shade, producing a charming color effect. The plant grows about 2½ feet high.

October Gold. Extremely free-flowering, of a bronzy yellow shade; it blooms late and is one of the very best.

Provence. Beautiful rose color, with a golden centre, forming a large imbricated bloom; of splendid branching habit and a vigorous grower. The plant is usually 2½ feet high, flowering in September and October.

Queen of the Earlies. This is the parent plant of the yellow sort of the same name, except this is a pure spotless white. Blooms in September and October.

Wells Crimson. Bright crimson flowers, while the reverse and tips of petals are golden bronze.

Price of any of the above hardy early flowering double Chrysanthemums in strong plants, that will flower the first season, 20c. each; doz., $2.00; $15.00 per 100.

SPECIAL OFFER: One each of the above 19 varieties for $3.00.

After June 15th, we will undertake to furnish these early flowering Chrysanthemums (if the demand is not too heavy in the early season) in 6-inch pots. Extra strong plants, 50c. each; doz., $5.00; $37.50 per 100.

Border Beauty. A fiery red shade of orange, tipped gold. A distinct and attractive variety; looms up well from a distance.

Champagne. Rich, ruby red; of wonderful free-flowering habit. It is among the later varieties, starting to flower early in October and lasting until mowed down by frost.

Countess. A lovely pure white variety, which produces very large flowers, when disbudded. As a cut flower it is one of the best. It flowers during September and October.

Crimson Marie Masse. Exceptionally fine, having the vigorous habit and free-flowering character of the parent plant; the shade of red is particularly fine.

Ethel Blades. A distinct shade of chestnut red, in fact the color is so unique, that it is difficult to appreciate, unless one actually sees it in bloom.

Goachers Crimson. This variety grows about 2½ feet high, with flowers, which are carried on long stems. When disbudded, the rich crimson blooms are often 5 inches in diameter. It begins to bloom early in September.

Golden Queen of the Earlies. A sport from the white variety of a similar name. This, however, is a rich shade of yellow and may be regarded as one of the best in its class. The flowers are large, borne upright and the stems are very stiff.

L'Argenteuillais. A splendid grower, bearing magnificent flowers of a glowing shade of chestnut red.

La Parisienne. A very large white type, producing extra fine flowers, blooming towards the end of September.

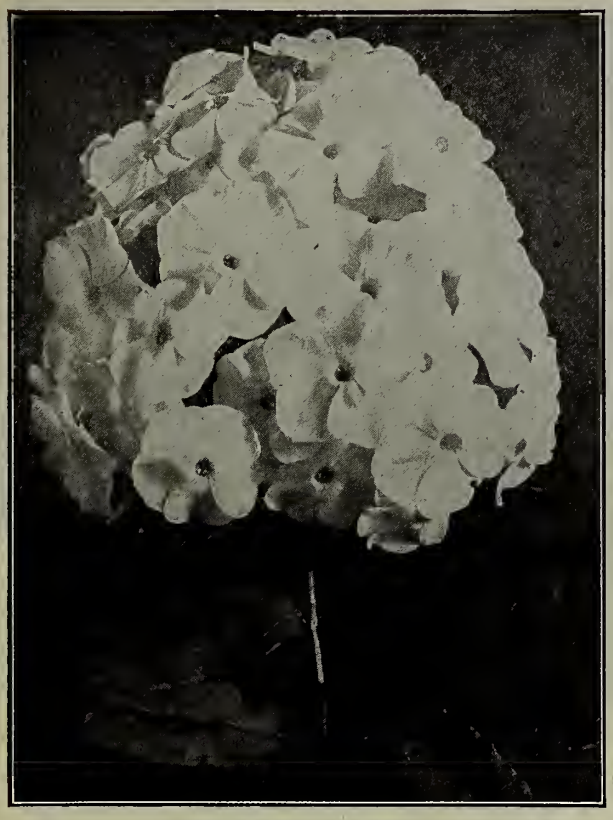
A PAGE OF TWELVE NEWER HARDY PHLOXES



Phlox Tapis Blanc

Hardy Phlox have become so generally known that it seems almost out of place to pass any remarks about them. We are convinced that the varieties offered on this page, after having them tried in our nursery thoroughly, represent the best sorts obtainable. In the past summer they were admired by thousands of people, who passed our Nurseries by train, trolley or automobile and who were fortunate enough to be able to inspect them at close range through a personal visit.

Africa. A rich shade of royal purple, which is suffused with crimson. The variety is exceptionally distinct, nothing really can take its place. The flower trusses are enormous, and it should be included in every collection, where real show is wanted. 25c. each; doz., $2.50; $15.00 per 100.

Asia. The elongated flower heads with us at the Nursery were easily 7 inches long and 5 inches through the centre; in fact, on young plants, set out last spring, nothing was on view but the flower truss, so gigantic were they. It is a rich shade of mauve, entirely distinct from other varieties. On account of having a large stock the price has been marked low, when in reality it should be more. 25c. each; doz., $2.50; $15.00 per 100.

Gefion. A rich peach-blossom pink with enormous flower trusses. The plant is of compact growth and very sturdy. The flowers have a deeper pink eye and altogether it may be regarded as a new shade. 30c. each; doz., $3.00; $18.00 per 100.

Iris. This is a variety of rare merit and whether grown in masses or as a single specimen, the color will immediately arrest the eye. It is a deep reddish violet, of compact erect habit with flower trusses, that rival any others for size. 35c. each; doz., $3.50; $20.00 per 100.

Linfield Beauty. For the present this may safely be regarded as the salmon pink Phlox of the future. We cannot describe it better than to say, it is an improved variety of Elizabeth Campbell. The flowers, though, are of heavier texture than the latter and it keeps its color remarkably well during hot weather; in fact, at our Nurseries, we observed last summer, that the dryer and hotter the weather, the more intense seemed the color of this Phlox. It begins to flower early and lasts late into the summer and all who have seen it at our grounds last year, claimed it to be the best of its color. Although we did not catalog it last year, we had a heavy demand for it, consequently the supply will be limited. Early ordering is advisable. 50c. each; doz., $5.00; $35.00 per 100.

Rheinlander. Deep salmon pink, with a distinct bright red eye. The plant is of a vigorous, branching habit and flowers with wonderful freedom. It is very early and lasts well into the season. The trusses are of gigantic size and of fine form and substance. 30c. each; doz., $3.00; $18.00 per 100.

Tapis Blanc. Undoubtedly the best of the semi-dwarf white sorts. The flower panicles are immense, making a great display early in the season, lasting well into the autumn. In our judgment, after having proved it, we feel safe in saying that it is the best white Phlox to-day. 50c. each; doz., $5.00; $35.00 per 100.

Tragedie. Deep carmine, a distinct shade with a lighter red eye. The flower heads are very compact and attractive. 30c. each; doz., $3.00; $18.00 per 100.

Every one, who has a hardy garden or an unoccupied space in the flower border, should plant some Delphiniums. On account of the important part Hardy Larkspurs play in perennial plantings, it occurred to us that a brief treatise on their culture, which follows, might be of assistance to our customers. The plants can be set out in the spring when the ground has opened permanently. Pot-grown specimens can be successfully planted from then on up until the first of November. In view of the wonderful display that Larkspurs make, it is worth while to exercise care in locating a most suitable position and in the preparation of the ground. Latter should have a good natural drainage. Never use animal manure in planting Delphinium, unless it has been incorporated in the soil a year before planting. Pure bonemeal is the best fertilizer in promoting growth. Apply with it also some wood ashes; the latter will assist in holding in check earth grubs, which at times attack the roots and crowns of the plant. In order to keep Larkspurs in bloom continuously during the summer, cut the old flower stems off, after they have faded, and new shoots will produce flower heads successfully. To get the best out of hardy Larkspur in the way of flowers, feed them occasionally during the growing season with an application of ground bone. While it is not necessary, a slight covering of long straw or leaves over the crowns of the plants during winter will prove a great benefit. Our stock of Delphiniums is very large and embraces the very best varieties.

This "Queen of Spring" holds a place entirely her own in effective gardens. The exquisite form, the delicate and rich colors, its value for garden or house decoration, and the delightful fragrance are all points in its favor. No disease or insect ever troubles this plant. The best effect of Pæonies is attainable when massed by themselves in groups on lawns or borders with a distinct background of shrubbery. They delight in a sunny location in deep rich soil. After planting take care to see they are watered regularly until you feel they are established. At blooming time the size and quality of flower are greatly increased. if the plants are watered in absence of occasional rains. In planting always take care to see that the crown or top of root is not more than 1 to 2 inches below the surface when covered. The roots are perfectly hardy and once planted remain for years, increasing in size. Roots can be delivered beginning in April or in the autumn beginning in September.

Attention is called particularly to our revised list of named varieties, which includes the very finest sorts. The day of the common garden pæony is about over, the improved named sorts, which cover every imaginable shade of color, being sought after instead. **We send out only extra strong roots.**

Standard Privet

STANDARD PRIVET TREES

These should prove to be in great demand, as they resemble from the distance, when in foliage, a Bay Tree or Box Tree. The stems are about 4 feet high, the crowns 18 inches high by 15 inches in diameter. With an occasional shearing or trimming during the first season, the heads can be shaped perfectly. The plants, when in foliage, which is from May until December, are a rich deep green, the same as a Privet Hedge. The plants, when received, should be set out, where they are to remain permanently; as they are perfectly hardy, no protection of any kind is necessary. In the early spring the plants are dormant, but break into foliage about May.

Shipment is made in strong wooden tubs, and should it be desired to use the trees on the porch or on long walks, they can be left in the tubs, in which event, however, care should be taken to water them liberally in dry weather.

Price, $2.00 each; 2 for $3.75; 6 for $11.00; $21.00 per dozen.

MICHELL'S CHOICE THRIFTY HEDGE PLANTS

A Hedge of Berberis Thunbergii—Nothing in the Hedge Plant Line Equals it for Grace and Beauty

BERBERIS THUNBERGII

(Japanese Barberry)

A good, hardy plant of low dense growth. There is an air of grace and refinement to the Barberry Bush, which is not embodied in any other hedge plant. It is a brilliant light green from early spring to winter. It has a manner of growth which does not give it the stiff, cold appearance which many other hedge plants have. It should really be regarded as a shrub, as it can be planted individually in lawn or border. The slender branches are prickly with small thorns, and tend to make a defensive hedge that few animals will attempt to penetrate. In autumn the foliage is a bright crimson; when it falls a profusion of scarlet berries, which remain throughout the winter, are revealed on the branches.

Price of Berberis

1 to 1½ ft.	$1.75	$12.50	$100.00
1½ to 2 ft.	2.00	15.00	120.00
2 to 2½ ft.	4.00	27.50	200.00

CALIFORNIA PRIVET

Exceedingly beautiful; leaves deep green, bright and very glossy. Especially adapted for hedges at the seashore; easily transplanted. Unlike a fence which needs painting, repairing, etc., and then never looks well. This hedge is no further expense after planted, and it adds dignity and charm to any home, and increases the value of real estate. Being absolutely hardy, it increases in its beauty with each successive year, and the possibilities are amply displayed at some of the model suburban home grounds in and around Philadelphia. Privet is somewhat of an Evergreen nature and looks attractive until real winter sets in. To establish a good hedge, the proper foundation is necessary. The trench should be thoroughly manured, and received in addition a liberal application of Michell's Pure Bone Meal and both worked in with a spade. Plants should be set 12 inches apart in double rows, in ziz-zag fashion, so that the plants are diagonally opposite each other, this practically places them 6 inches apart, which is desirable to get a quick dense growth. Plant from October 1st to November 15th and from March 15th to May 15th. Ask for our special free circular on California Privet.

STANDARD OR TREE-SHAPED PRIVET

A Privet Hedge is Much More Attractive than the Best Fence

GOLDEN or VARIEGATED LEAVED PRIVET

Like the California variety, but each leaf is margined and blotched golden yellow, giving it, from a distance, a striking appearance. It is quite new and the stock is limited, when available it will become very popular, we recommend it especially for placing among shrubbery or for planting on the lawn, the contrast between the grass and golden foliage is beautiful.

Bushy Plants, 18 to 24 in. high, 15c. each; doz., $1.50; 100, $10.00.

BOXWOOD **(Buxus suffruticosa. For Edging)**

In Europe the Boxwood edging plays a very conspicuous part in every garden. There is something about it which adds a homelike feeling to the surroundings. At times, especially in the morning, or after a rain, it seems to permeate the air with a distinct, pleasant odor. A planting lasts a lifetime. Many Boxwood enclosures, planted a hundred years ago, are in existence to-day. It grows rather bushy, instead of in height. It should be set about 4 inches apart and trimmed to shape according to its growth.

Strong Plants, 4 to 6 inches high, $1.00 per doz.; per 100, $6.00; $50.00 per 1000. See also page 179 for other Boxbush.

Boxwood Edging Adds to a Garden Charm and Beauty That Cannot be Obtained With Any Other Plant

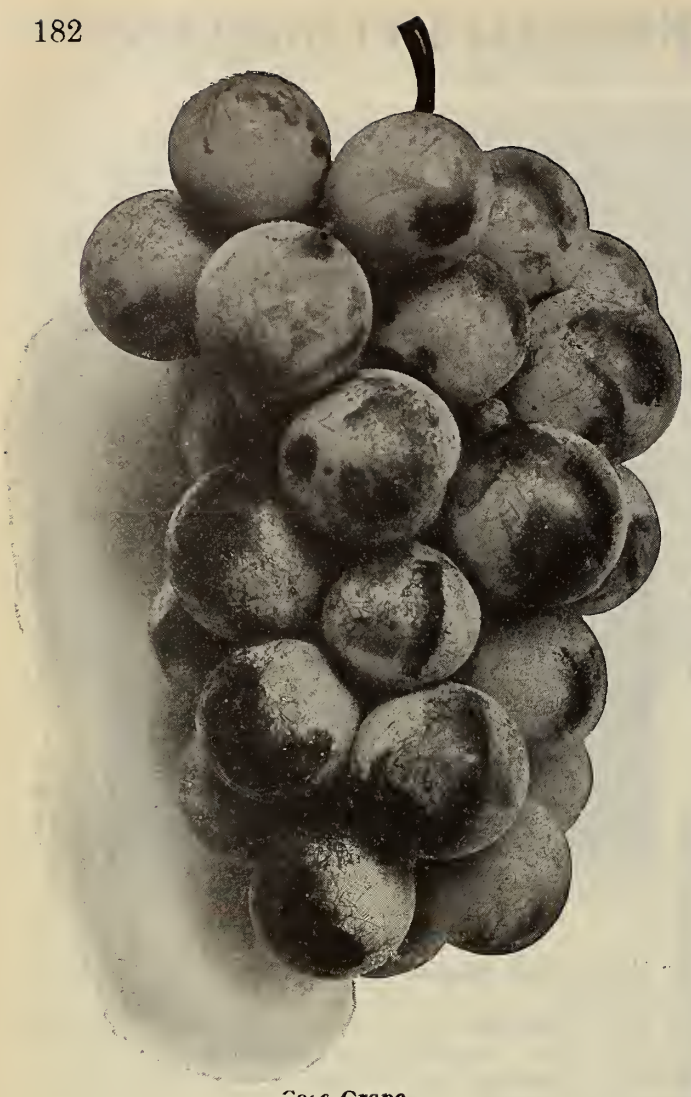
MICHELL'S

NEW VARIETIES OF POPULAR FRUITS



Caco Grape

CACO GRAPE (A cross between Concord and Catawba)

The most delicious of all Grapes—perfectly hardy, has been pronounced by America's most expert grape growers *to equal in high quality and melting texture* the finest varieties grown under glass. When one considers the price of the greenhouse product and realizes that the wonderful Caco can be grown in the back yard, almost without attention, the force of the above statement is apparent.

The large berry is wine-red. Bunch of good size, compact and of good form. Ripens ten days to two weeks in advance of Concord; rich in sugar, excellent in flavor. Vine a very strong vigorous grower, healthy and prolific.

Fruit for past two years sold in open market by the crate at more than double the price of any other variety.

Awarded a medal by the American Institute of New York; the highest honor ever conferred a variety of fruit by this (time honored) institution. We cannot recommend the Caco too highly.

Very strong vines, 2 years, each, 50c.; dozen, $5.00; 100, $35.00. (Parcel Post Weight, 1 lb. each).

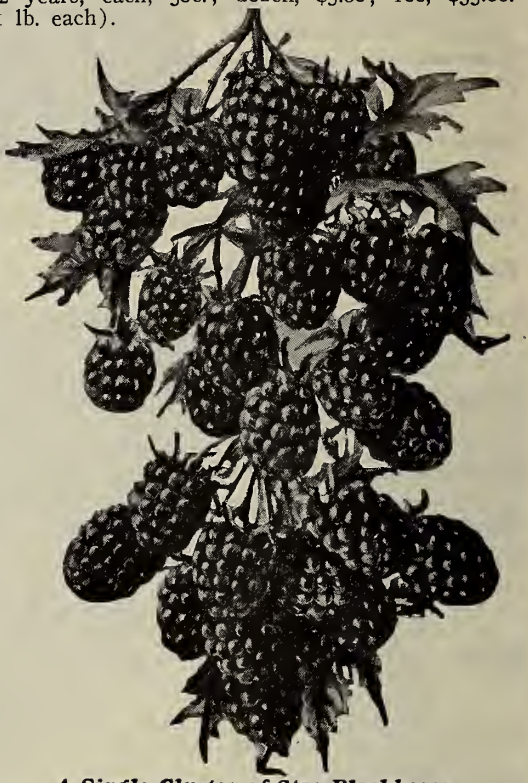
STAR BLACKBERRY

Imagine picking great clusters of giant sized Blackberries from canes that resemble grape vines. This is what you can do if you plant the Star Blackberry. The yield is so great that over eighty quarts of berries have been picked from a single plant of it in one season.

Train to a stake or trellis or over an arbor as grapes are grown—and give them plenty of room.

Berries large, of attractive appearance and rich, sprightly and luscious quality. They keep in good condition for a long time and can be safely shipped almost any distance. The ideal berry for the home garden. Transplanted plants, which should bear this year, each, 20c.; dozen, $2.00; 100, $12.50.

(Parcel Post Weight, each, 1 lb.; 5 lbs. per doz.).



A Single Cluster of Star Blackberry

NEW EVERBEARING RASPBERRY "RANERE"

It yields its first crop of berries in June (the regular season), and yields an equally heavy crop the latter part of August, and continues bearing right up to November.

It thrives equally well on sandy and heavy soil. The fruit is large, of a beautiful crimson color, very sweet and juicy and is borne in great abundance, and does not seem to sunscald as easily as other sorts, last season we had a photo made of a stalk which had by actual count 169 berries on one stem, this will give some idea of its free fruiting qualities.

We will send out strong plants, which, from our experience in the past, should bear the first season.

Price: 60c. per doz., per 100, $4.00; $17.50 per 500; $30.00 per 1000.

(Parcel Post Weight, per doz., 5 lbs.).

Native Sweet American Chestnut

The well-known Chestnut of the forest, for sweetness and quality unsurpassed. A vigorous, healthy-growing tree, and the best stock on which to graft the improved varieties. It makes a beautiful shade tree, also, showing billowy masses of creamy bloom in summer. In its season no other nut is more sought after, as evidenced by the enormous quantities sold in both the wholesale and retail markets. 5 to 7 feet, $1.00 each; $10.00 per doz.

WALNUTS

Persian Kaghazi is claimed to be the hardiest of all soft-shelled Walnuts, and stands several degrees below zero without injury. It is a vigorous, free grower; very prolific, producing nuts in clusters, and comes to fruiting very young. The nut is larger than in the ordinary varieties; the kernel full, plump, meaty, sweeter, richer in oils and of finer flavor. The shell is thin but not tender, like some "paper shell" varieties, does not crack in handling, still may be crushed in the fingers. Very desirable and valuable. 3 to 4 feet, 60c. each; 4 to 5 feet, $1.00 each.

Persian (*Madeira*). The well-known English Walnut, a handsome, lofty-growing tree of spreading habit, hardy and productive as far north as New York City. Trees of this variety are plentiful in New Jersey, and produce annually immense crops of thin-shell nuts of a delicious quality. This tree should not be planted for the nuts alone, but as a shade and ornamental tree, its handsome form, deep green foliage, and clean appearance, render it strikingly handsome as a lawn tree. 3 to 4 feet, 60c. each; $6.00 per doz. 4 to 5 feet, $1.00 each; $10.00 per doz.

Black Walnut. A native tree of large size and majestic form, beautiful foliage. The most valuable of all trees for its timber, which enters largely into the manufacture of fine furniture and cabinet-ware, and brings the highest price in market. Tree a rapid grower, producing a large, round nut of excellent quality. 3 to 4 feet, 60c. each; $5.00 per doz.

FILBERT. HAZELNUTS.

These are of the easiest culture, and among the most profitable and satisfactory nuts to grow. The bushes are of dwarf habit, entirely hardy, abundant yielders; succeed almost everywhere, and come into bearing young. 3 to 4 feet, 50c. each; $4.00 per doz.

PAPER SHELL PECANS

The impression that the Pecan can be grown only in certain favorable, moist locations, is rapidly being dismissed, as the trees are being continually discovered throughout the Middle and Western States in locations which have not been considered favorable to their growth. Right in Burlington County, New Jersey, are a number of large, handsome trees, two to three feet in diameter, on high, dry ground, and producing annually five to six bushels of delicious thin-shelled nuts. The tree is hardy, tough, free from blight, insect scales, or any of the usual ailments common to orchard trees. 3 to 4 feet, 60c. each; $5.00 per doz.

HICKORY SHELLBARK

To our taste, no other nut that grows, either foreign or native, is superior to this; in quality it possesses a peculiar rich, nutty flavor, excelled by none. The tree is of a sturdy, lofty growth. The wood, on account of its great strength and elasticity, is highly prized for making agricultural implements, and is unsurpassed for fuel. 4 to 5 feet, 85c. each; $9.00 per doz.

MEHLER'S HANDY GARDEN TOOLS

HANDY GARDENER

MEHLER EDGER

MEHLER SCRAPER

MEHLER HOE

THE MEHLER LINE OF PRACTICAL GARDEN TOOLS

These are the invention of a practical amateur gardener, who has spent much time and labor in perfecting them. Each tool is fitted for particular work and performs the same to perfection. The "Handy Gardener" and "Handy Hoe" can be used without bending the knees, and are especially suited for ladies who like to work in the garden.

HANDY GARDENER. For cultivating among flower beds, in the vegetable garden, etc., etc., gets closer to the plant than any other tool. Does all that any hoe, weeder and rake will do in one operation. **Price, 75c.**

HANDY HOE. This will do what any half-moon and square hoe will accomplish. It has a wide side and a narrow side, while another part of it will answer as a rake to pulverize the soil. **Price, $1.00.**

HANDY EDGER. Designed so as to make it suitable for edging gravel, dirt or cement walks. It is the only edger made that has a perfect arrangement on it for foot pressure, which makes easy edging possible. A device on the rear end of the hoe makes it suitable for running along the edge of the path, after the turf has been cut, thus throwing it away from the body of the lawn. **Price, $1.25.**

HANDY SCRAPER. This was originally designed as a dropping-board scraper in poultry and pigeon houses. It has a blade 13 in. wide, enabling the operator to perform a lot of work in a short time. It gets in the corners easily and has a sharp crimped edge on the upper side, which is used to loosen up any hard substance. It is also suited for a variety of other work around the farm or garden. **Price, 75c.**

HAPPY JACK SAILOR WIND MILL

An interesting feature for the children's garden, although they are equally practicable for the grown-ups. They revolve with the least puff of wind, and on account of their looks they serve as a scarecrow for undesirable birds or animals. They are handsomely finished in colors and can be fastened to any tree, post, house or wash line pole. Height, 15 in. **$1.25 each. P. P. W. 3 lbs.**

BRANDING IRONS

It is essential on all well-regulated farms and country estates to have the wooden portions of the implements branded with the number or name of the owner. This can be only accomplished with the aid of a branding iron, which can be heated in a few moments and the name of the farm, estate or owner burned on the tool. This goes a long way towards preventing the goods from being stolen. These are made to order, 3-16, ¼, ⅜ inch letters. Price of each size, with 8 letters or less, $1.50. Additional letters, 15c. each. ½-inch letters, per brand of 7 letters or less, $1.75. Additional letters, 20c. each.

A COUPLE OF UNSOLICITED OPINIONS JUST RECEIVED

Watertown, N. Y., November 14, 1914.

Dear Sirs:

I thought it might interest you to tell you a few facts about a Continental Lawn Mower I bought in the spring of 1889, twenty-five years ago.

First—It has been in almost continual seasonal use since I bought it.

Second—It has been used to break in several lawns where the ground was very rough.

Third—It has never been resharpened. It is the self-sharpening model.

Fourth—It cuts as well to-day as when it was new.

Fifth—It has never been out of order with this exception, that after twenty-five years' use I had to replace the wooden roller at a cost of fifty cents.

Sixth—It has always run lightly and has done its work neatly.

To-day I used it for the last time this season. As I put it away for the winter, I thought it was but fair to so faithful a servant on its twenty-fifth anniversary, to acknowledge its fidelity, and at the same time send this word of appreciation to the men who put that class of machinery on the market.

Very truly yours,

Rev. CHAS. W. FLETCHER.

Springfield, O., November 26, 1914.

Gentlemen:

I saw your "ad" in the *Saturday Evening Post.*

Please send me your book "The Lawn—Its Making and Care."

What I really want to tell you is *my* experience with the "Pennsylvania Lawn Mower" I have a Pennsylvania Mower that was purchased in Delaware, Ohio, in 1884—for $16.00, has been used every season since, and on a good-sized lawn, has never been sharpened but once, and that was against my wishes; this was several years ago. It is still doing business this year, and I have never seen a mower new or old that I would give my old "Pennsylvania" for.

I keep it thoroughly adjusted and let it do its own sharpening. It is almost noiseless, where other mowers make more noise than a motor truck.

It has never cost me but 50 cents for repairs, and that was due to my own carelessness; I broke a small casting by screwing it too tight.

The only thing worn to amount to much are the two end castings where the wooden roller works in, they are worn almost through. There is no mower that can compare with the "Pennsylvania" in my estimation.

Yours truly,

C. J. LIGGETT,
1413 South Fountain Ave.,
Springfield, Ohio.

An excellent machine for properly sowing grass seed. It places it in the ground in close furrows, covers and rolls it at one operation. The result is an even, quick growth of grass. INCUBATORS, BROODERS, ETC.

PRAIRIE STATE INCUBATOR

The Series A Incubator is the Sand Tray Type with Nursery Attachment; the Series B is the type without Nursery Attachment, and has an increased egg capacity. In the Series B eliminating the nursery enables the strip space, which heretofore has been left blank in the tray, to be utilized. If the strip or flop-over tray is used in the Series B it reduces the egg capacity about 10 per cent.

It cannot be burned nor broken and cannot warp and fall apart. It provides overhead heat so chicks cannot crowd. Provides nearly 200 square inches more hovering space than any other hover made. It will not only raise more chicks than any other Brooding device, but will raise also the winter supply of sprouted oats. Price, $8.50.

ALPHANO HUMUS (POOR SOIL RENOVATOR FOR LAWNS, GARDENS, PUTTING GREENS, FLOWER BEDS, ETC.)

You can have a Conservatory like this if you use Alphano Humus

This article is prepared from deposits of decayed vegetable matter, taken from the bottom of an abandoned dried lake. It has been successfully used for several years and has proven to be worthy of extensive use. It is desirable for greenhouse, lawn, golf grounds, vegetable and flower garden work. Humus in some form is the most essential element of plant life. It is rich in Ammonia, Phosphoric Acid, Potash and Lime and shows an analysis of between 77 and 80 per cent of Humus. For lawns it is applied as a top dressing from ½ to 1 inch in depth, which should be then worked in.

If grass seed is to be sown, then is the time to apply it. On golf links it is used in a similar way.

For Flower and Vegetable garden, apply at rate of ½ to 2 inches deep and fork it well in the soil, or apply it in trenches, the same as you would well-rotted manure. For pot plants mix about ⅓ of the Humus with ⅔ of regular potting soil. A ton of Humus is equal to about 2 cubic yards. The smallest quantity sold is 100 lbs. Prices f. o. b. Philadelphia, $1.00 per 100-lb. bag; 500 lbs., $4.50; $8.00 per 1000 lbs.; per ton, $15.00. Prices f. o. b. Alphano, N. J., 500 lbs., $4.00; $7.00 for 1000 lbs.; 2000 lbs. (1 ton), $13.00. Carload lots in 100-lb. bags, minimum car 20 tons, $10.00 per ton. Carload lots in bulk, minimum car 30 tons, $8.00 per ton.

MICHELL'S SPECIAL ANT EXTERMINATOR

(Especially for Putting Greens)

Ants are as troublesome as worms and are more destructive, as they undermine the sod, separating the grass roots from the subsoil and causing the turf to die. A few applications of our ant exterminator, applied as follows, will bring results. Place as much of the exterminator as will go on the end of a teaspoon, and drop into the ant hills; don't disturb the latter until the next day, when they can be brushed away; should any more hills appear, make another application. Use only on a dry morning, while ants are working. 20c. per ¼ lb.; ½ lb., 40c.; 75c. per lb.; $3.00 for 5 lbs.; 10 lbs., $5.50.

Watering in Earth Worm Destroyer

You can gather worms by the barrow load, if you use Michell's Earth Worm Destroyer.

EARTH WORM DESTROYER

For lawns, putting greens, grass tennis courts, etc.

This preparation can be used effectively on lawns and putting greens, since it combines a worm destroyer and fertilizer, thus improves the grass. A mild day should be selected for its use, when the soil is moist and the worms are active. The turf to be treated should first be saturated with water by means of the hose or otherwise. Apply the worm destroyer broadcast by hand at the rate of one-half pound to the square yard, again apply water liberally, to soak in the preparation. Worms will immediately come to the surface and die and they can be swept together. The preparation must not be used during frosty weather, and only when the worms are working near the surface.

***Michell's Brand.** 1 lb., 10c.; 45c. for 5 lbs.; 10 lbs., 75c.; $1.50 for 25 lbs.; 50 lbs., $2.50; $4.00 for 112 lbs.; 560 lbs., $16.00; $30.00 for 1120 lbs.; 2240 lbs., $57.00.

Carter's Brand. In 100-lb. bags only, $5.00; $19.00 for 500 lbs.; 1000 lbs., $37.50; $70.00 for 2000 lbs.

* This is made after an English formula in Great Britain, and extensive trials have shown it to be very effective, being used in the same manner as Carter's.

We can also supply Reade's Worm Killer and "Radix" Worm Eradicator.

TARGET BRAND PRODUCTS

Under this trade-mark are manufactured various brands of Horticultural and Agricultural Insecticides and Preparations. Our experience with them covers a period of almost ten years, during which time we have had occasion to try them out in every possible way. They are considered the best in their class, and are used and indorsed by up-to-date fruit-growers and agriculturists everywhere.

FOR PERFECT FRUIT

Target Brand Scale Destroyer

Not mailable

It is an oil which is instantly soluble in water, and passes through any spray-pump nozzle without clogging. It is economical, quickly prepared, easily applied, and does its work rapidly and effectively. Indorsed and recommended by fruit-growers everywhere.

One gallon makes twenty gallons of solution ready to apply. For use on dormant trees only (while the leaves are off during fall, winter and spring).

Target Brand Scale Destroyer costs 35 cts. per qt., 65 cts. per half gal., $1 per gal., $3.75 for 5 gals., $7.50 for 10 gals., $12.50 for 25-gal. barrel, $23 for 50-gal. barrel.

Lime-Sulphur (Liquid)

Not mailable

This is now extensively used for spraying against scale; desirable for peach trees and other stone fruits. It is a fungicide as well as scale-destroyer, and is highly effective. Dilute for dormant trees one gallon to twelve gallons of water, either hot or cold. Mixes instantly and does not separate.

Qt. 25 cts., ½ gal. 45 cts., gal. 75 cts., 5 gals. $2.25, 10 gals. $3.75, 25 gals. $6, 50 gals. $9.

Target Brand Arsenate of Lead (Paste)

For spraying trees and shrubs against the attacks of leaf-biting insects of all kinds; especially valuable for spraying to destroy the codling-moth. It comes in paste form, and dilutes one pound to 25 gallons of water. If apples, pears, quinces, peaches and stone fruits are sprayed with this after the blossoms fall and during the period the fruit is developing, there is a marked absence of rot, wormy fruit and other blemishes. **Lb. 25 cts.; 80 cts. for 5 lbs.; 10 lbs. $1.50; $3 for 25 lbs.; 50 lbs. $5.50; $10 per 100 lbs. Allow postage if wanted by Parcel Post.**

Target Brand Bordeaux-Arsenate

This is a combination of bordeaux mixture and arsenate of lead, in nature like Pyrox. Its use combines an application of fungicide and insecticide at one time. It is the ideal preparation to use at intervals while the fruit is developing on trees such as apples, stone fruits, etc. Where this is used intelligently, 100 per cent quality fruit will be the rule oftener than the exception. We cannot recommend it too highly. A pound dissolves in five gallons of water. It sticks to the foliage and will not wash off for a long period. **Lb. 20 cts.; 80 cts. for 5 lbs.; 10 lbs. $1.40; $3.25 for 25 lbs.; 50 lbs. $5.50; $10 for 100 lbs. Allow postage, at your zone rate, if wanted by Parcel Post.**

See also pages 220 and 221 for a complete line of Insecticides

TARGET BRAND WEED KILLER

Not mailable

Liquid Weed Killer can effectually be distributed with a watering-can or in a sprinkling-wagon.

An effective combination of high-grade chemicals which, diluted in water at one to fifty, destroys the roots as well as the tops of all weeds and vegetation to which it is applied.

One gallon diluted with fifty gallons of water is sufficient to cover 100 to 150 square yards; and one or two applications are sufficient for an entire season. Does not injure marble, cement or fencing. The best time for applying is just after a rain.
